# Lenze makes many things easy for you.

With our motivated and committed approach, we work together with you to create the best possible solution and set your ideas in motion - whether you are looking to optimise an existing machine or develop a new one. We always strive to make things easy and seek perfection therein. This is anchored in our thinking, in our services and in every detail of our products. It's as easy as that!

**1**

## **Developing ideas**

Are you looking to build the best machine possible and already have some initial ideas? Then get these down on paper together with us, starting with small innovative details and stretching all the way to completely new machines. Working together, we will develop an intelligent and sustainable concept that is perfectly aligned with your specific requirements.

**4**

## **Manufacturing machines**

Functional diversity in perfect harmony: as one of the few full-range providers in the market, we can provide you with precisely those products that you actually need for any machine task – no more and no less. Our L-force product portfolio, a consistent platform for implementing drive and automation tasks, is invaluable in this regard.

**2**

## **Drafting concepts**

We see welcome challenges in your machine tasks, supporting you with our comprehensive expertise and providing valuable impetus for your innovations. We take a holistic view of the individual motion and control functions here and draw up consistent, end-to-end drive and automation solutions for you - keeping everything as easy as possible and as extensive as necessary.

**5**

## **Ensuring productivity**

Productivity, reliability and new performance peaks on a daily basis – these are our key success factors for your machine. After delivery, we offer you cleverly devised service concepts to ensure continued safe operation. The primary focus here is on technical support, based on the excellent application expertise of our highly-skilled and knowledgeable after-sales team.

**3**

## **Implementing solutions**

Our easy formula for satisfied customers is to establish an active partnership with fast decision making processes and an individually tailored offer. We have been using this principle to meet the ever more specialised customer requirements in the field of machine engineering for many years.

# A matter of principle: the right products for every application.

Lenze's extensive L-force product portfolio follows a very simple principle. The functions of our finely scaled products are assigned to the three lines Base-Line, State-Line or High-Line.

But what does this mean for you? It allows you to quickly recognise which products represent the best solution for your own specific requirements.

#### **Powerful products with a major impact:**

- Easy handling
- High quality and durability
- Reliable technologies in tune with the latest developments

Lenze products undergo the most stringent testing in our own laboratory. This allows us to ensure that you will receive consistently high quality and a long service life. In addition to this, five logistics centres ensure that the Lenze products you select are available for quick delivery anywhere across the globe. It's as easy as that!

# g500-H helical geared motors

## General information

### Product information

In combination with three-phase AC motors, our helical gearboxes form a compact and powerful drive unit. Numerous options at the input and output end provide for the drive to be exactly adapted to your application.

The robust helical gearboxes feature high permissible radial forces, closely stepped ratios and a low backlash. They are available in 2-stage and 3-stage design with a output torque up to 14000 Nm and a ratio of up to  $i= 370$ .

### Versions

- Fine-scaling of size / torque - provides for an optimum machine adaptation
- Standardised shaft and flange dimensions for an easy machine integration
- High efficiency

### Three-phase AC motors as a basis for geared motors

In a power range of 0.06 to 55 kW, Lenze offers inverter-compatible three-phase AC motors for comprehensive tasks. These drives come in different efficiency classes and can be used for the versions required for the versions required for open-loop or closed-loop controlled inverter operation.

- IE1 motors up to a power of 0.55 kW
- IE3 motors from 0.75 kW to 55 kW

### Customer benefit:

- Different efficiency classes for the greatest economic benefit
- Space-saving thanks to compact direct attachment to Lenze gearboxes
- Can be used universally for a wide range of machine tasks due to the market-oriented modular system

g500-H helical gearbox with three-phase AC motor

g500-H helical gearbox with three-phase AC motor and 8400 motec inverter

g500-H helical gearbox with servo motor

# g500-H helical geared motors

## General information

## Equipment

### Overview

The equipment includes all the options available as standard and all the built-on accessories of the product.

### Standard design

- For the m540 motor, only temperature monitoring with PTC is available.

1 - Detailed information on housing type.

# g500-H helical geared motors

## General information

### Equipment

#### Mounting position, position of system components

- ▶ In the following graphics, the terminal box in position 2 is colour-coded. If the mounting position (A ... F) changes, the terminal box positions 2 ... 5 are rotated accordingly.
- ▶ To reduce the number of different versions, the gearboxes can also be ordered with combined mounting positions:
  - g500-H45 in mounting position ABCDEF
  - g500-H100 ... H450 in mounting position AEF

- ▶ For details regarding the cable entry see motor chapter/product extensions.

### General information about the data provided in this catalogue

The powers, torques and speeds specified in this catalogue are rounded values and are valid under the following conditions:

- Operating time/day = 8 h (100% OT)
- Duty class I for up to 10 switching operations/h
- Mounting positions and designs in this catalogue
- Standard lubricant
- $T_{amb} = 20\text{ °C}$  for gearboxes,  
 $T_{amb} = 40\text{ °C}$  for motors (in accordance with EN 60034)
- Site altitude  $\leq 1000\text{ m amsl}$
- The selection tables provide the permissible mechanical powers and torques. For notes on the thermal power limit, see chapter drive dimensioning.
- The rated power specified for motors and geared motors applies to operating mode S1 (in accordance with EN 60034).

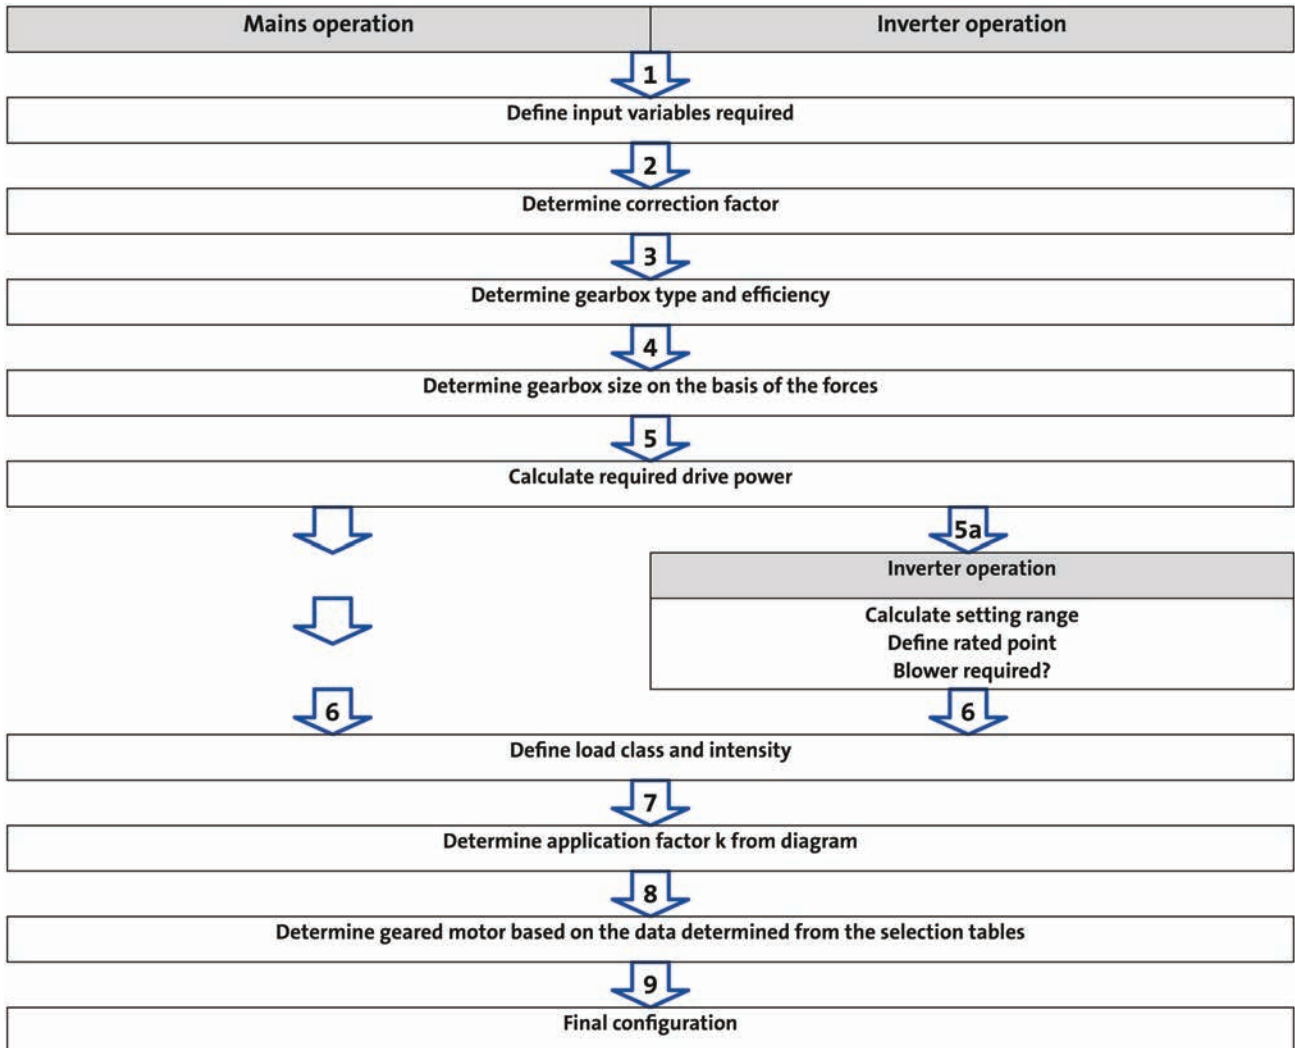

Under different operating conditions, the values obtained may vary from those listed here.

In the case of extreme operating conditions, please consult your Lenze sales office.

## Procedure of a configuration process

### Workflow

You can use our configuring software Drive Solution Designer for precise drive dimensioning.

The Drive Solution Designer helps you to carry out a fast and high-quality drive dimensioning. The software includes well-founded and proven knowledge on drive applications and electro-mechanical drive components.

Please contact your Lenze sales office.

### Procedure of a configuration process

#### 3 determine gearbox type and efficiency

Gearbox type			Axial gearboxes		Right-angle gearboxes
			Helical gearbox	Shaft-mounted	Bevel gearbox
Product			g500-H	g500-S	g500-B
Gearbox efficiency	2-stage gearboxes	$\eta_G$	0.96	0.96	0.96
	3-stage gearboxes	$\eta_G$	0.95	0.95	0.95

#### 4 determine gearbox size based on the forces on the output

Transmission element		Gear wheels	Sprockets	Toothed belt pulleys (depending on the initial stress)	Narrow V-belt (depending on the initial stress)
Additional radial force factor	$f_z =$	$\geq 17$ teeth = 1.0 $< 17$ teeth = 1.15	$\geq 20$ teeth = 1.0 $< 20$ teeth = 1.25 $< 13$ teeth = 1.4	With belt tightener = 2.0 - 2.5 Without belt tightener = 2.5 - 3.0	1.5 - 2.0
		Calculation		Check	
Radial force	[N]	$F_{rad} = 2000 \times \frac{M_{L,max} \times f_z}{d_w}$		$F_{rad} \leq f_w \times F_{rad,max}$	
Axial force	[N]			$F_{ax} \leq F_{rad,max} \times 0.5$	

$d_w$  = effective diameter [mm] transmission element  
 $f_w$  = additional load factor

- For permissible radial and axial forces and additional load factor see the "Technical data" chapter

#### 5 calculate drive power

		Calculation	
Drive power required	[kW]	$P_1 = \frac{M_{L,max} \times \eta_{L,max}}{9549 \times k_L \times k_H \times k_{Tu} \times \eta_g}$	

$k_L$  = Correction factor - operating mode  
 $k_H$  = correction factor - installation height  
 $k_{Tu}$  = correction factor - ambient temperature

### Procedure of a configuration process - mains operation

#### 6 calculate intensity and determine duty class

Load class	Load type	Intensity
I	Smooth operation, small or light jolts	$F_I \leq 1.25$
II	Uneven operation, average jolts	$1.25 < F_I \leq 4$
III	Uneven operation, severe jolts and/or alternating load	$F_I > 4$

#### 25 - Duty classes

	Calculation	
Intensity	$F_I = \frac{\frac{J_L + J_M + J_B + J_Z}{i^2}}{J_M + J_B + J_Z}$	

$i$  = gearbox ratio

$J_L$  = moment of inertia of the load

$J_M$  = moment of inertia of the motor

$J_B$  = moment of inertia of the brake

$J_Z$  = additional moment of inertia (handwheel, 2nd shaft end ...)

#### 7 determine application factor $k$ from diagram

#### 28 - Load capacity and application factor

# g500-H helical geared motors

## Project planning

### Procedure of a configuration process - mains operation

8 determine geared motor based on the data determined from the selection tables

Selection table		Check
Drive power $P_N$	[kW]	$P_1 \leq P_N$
Output speed $n_2$	[r/min]	$n_{L,max} \approx n_2$
Output torque $M_2$	[Nm]	$M_{L,max} \leq M_2$
Load factor $c$		$k \leq c$
Order information		Example
Number of stages		2
Ratio $i$		3.267

### Standards

#### Operating modes

Operating modes S1 ... S10 as specified by EN 60034-1 describe the basic stress of an electrical machine.

In continuous operation a motor reaches its permissible temperature limit if it outputs the rated power dimensioned for continuous operation. However, if the motor is only subjected to load for a short time, the power output by the motor may be greater without the motor reaching its permissible temperature limit. This behaviour is referred to as overload capacity.

Depending on the duration of the load and the resulting temperature rise, the required motor can be selected reduced by the overload capacity.

#### The most important operating modes

Continuous operation S1	Short-time operation S2
<p>Operation with a constant load until the motor reaches the thermal steady state. The motor may be actuated continuously with its rated power.</p>	<p>Operation with constant load; however, the motor does not reach the thermal steady state. During the following standstill, the motor winding cools down to the ambient temperature again. The increase in power depends on the load duration.</p>
Intermittent operation S3	Non-intermittent periodic operation S6

# g500-H helical geared motors

## Project planning

### Standards

#### Duty classes

Depending on the load type, the duty classes or impacts are divided as follows:

Duty class	Load type
I	Smooth operation, small or light jolts
II	Uneven operation, average jolts
III	Uneven operation, severe jolts and/or alternating load

In order to support you in classifying your driven machine regarding the right duty class, the following shows sample applications with the corresponding duty class. Depending on, for instance, the operating frequency, driven machines can also have a higher impact. In case of uncertainties, please contact your Lenze sales office.

Drive	Duty class
Construction machines	II
Chemical industry	II
Conveyors	II
Fans	II
Plastics industry	II
Wood working	III
Hoists	III
Metal working	III
Food	II
Paper industry	III
Stones	III
Textile industry	II

### Standards

#### Degrees of protection

The degree of protection indicates the suitability of a motor for specific ambient conditions with regard to humidity as well as the protection against contact and the ingress of foreign particles. The degrees of protection are classified by EN 60529.

The first code number after the code letters IP indicates the protection against the ingress of foreign particles and dust.  
The second code number refers to the protection against the ingress of humidity.

Code number	Degree of protection	Code number	Degree of protection
0	No protection	0	No protection
1	Protection against the ingress of foreign particles $d > 50$ mm. No protection in the case of deliberate access	1	Protection against vertically dripping water (dripping water).
2	Protection against medium-sized foreign particles, $d > 12$ mm, keeping away fingers or similar	2	Protection against diagonally falling water (dripping water), $15^\circ$ compared to normal service position.
3	Protection against small foreign particles $d > 2.5$ mm. Keeping away tools, wires and the like	3	Protection against spraying water, up to $60^\circ$ to the vertical
4	Protection against granular foreign particles, $d > 1$ mm, keeping away tools, wires and the like	4	Protection against spraying water from all directions.
5	Protection against dust deposits (dust-protected), complete protection against contact.	5	Protection against water jets from all directions.
6	Protection against the ingress of dust (dust-proof), complete protection against contact.	6	Protection against choppy seas or heavy water jets (flood protection).

# g500-H helical geared motors

## Project planning

### Thermal power limit

The thermal power limit, defined by the heat balance, limits the permissible permanent gearbox power.

It is affected by:

- the churning losses in the lubricant. These are determined by the mounting position and the circumferential speed of the gears;
- the load and the speed;
- the ambient conditions: temperature, air circulation, input or dissipation of heat via shafts and the foundations.

We ask you to make a thermal check with the Drive Solution Designer (DSD) or contact the Lenze office responsible for you

- if the input speed  $n_1 > 1500$  r/min is exceeded in case of the gearbox ratios given in the following (can be e.g. recognised by the empty cells in the selection tables):

g500 thermal power limit	
Product	Ratio i
g500-H850 ... H3000	≤ 10
g500-S2100 ... S4500	≤ 16
g500-B1500 ... B4300	≤ 25

g500 thermal power limit	
Product	Ratio i
g500-H5000 ... H14000	≤ 25
g500-S8000 ... S19000	≤ 40
g500-B8000 ... B20000	≤ 60

- If the drive speeds mentioned in the following will be exceeded as a function of the mounting position:

g500 thermal power limit			
Product	Mounting position A	Mounting position A, B, E, F	Mounting position C, D
MD□MA□□063 ... 071 m550-P80 ... P100	4000 r/min	3500 r/min	3000 r/min
m550-P112 ... P132	3000 r/min	2600 r/min	1500 r/min
m550-P160 ... P180	2000 r/min	1800 r/min	1500 r/min
m540-P90 ... P250	1500 r/min	1500 r/min	1500 r/min

- ▶ For a short period of time up to 5 min, 30 % higher speeds are permissible

### Possible ways of extending the application area

- Synthetic lubricant (option)
- Shaft sealing rings made from FKM material/Viton (option)
- Reduction in lubricant quantity (after consultation with Lenze)
- Cooling of the geared motor by means of air convection on the machine/system

### Load capacity and application factor

#### Load capacity $c$ of gearboxes

Rated value for the load capacity of Lenze geared motors.

- $c$  is the ratio of the permissible rated torque of the gearbox to the rated torque supplied by the drive component (e.g. the built-in Lenze motor).
- The value of  $c$  must always be greater than the value of the application factor  $k$  calculated for the application.

#### Application factor $k$ (according to DIN 3990)

Takes into account the influence of temporally variable loads which are actually present during the anticipated operating time of gearboxes and geared motors.

$k$  is determined by:

- the type of load
- the load intensity
- temporal influences

Required:  $c \geq k$

- ▶  $S_h$  = switchings/h
- ▶ — Three-phase AC motors MD□MA
- ▶ - - - Three-phase AC motors m240/m540/m550

### Operational performance of three-phase AC geared motors

#### Operation on the inverter

An inverter enables energy-efficient operation of a system in virtually all application cases. The various operating modes, which can be created by making just a few simple settings, facilitate this. The following characteristics and corresponding specifications listed on the following pages can be used to calculate the optimum operating mode during the project planning phase.

#### Standard setting

In its initial state when delivered, the inverter is set up for basic operation with a three-phase AC motor with vector control. When operated in this mode, the rated torque of the motor is available in a setting range up to 50 Hz.

#### Extended setting range up to 87 Hz

If the V/f reference point on the inverter is set to 87 Hz, the rated torque can be used across an extended setting range. Here, a 230/400V motor is for example used and operated in a delta layout with a 400V inverter. The setting range is then increased by 40 %. The inverter must be dimensioned for a rated motor current of 230 V.

### Operational performance of three-phase AC geared motors

#### Torque derating at low motor frequencies

The diagram shows the motor frame size-dependent torque reduction for self-ventilated motors, taking the thermal behaviour during actuation of the inverter into consideration.

A = Operation with integral fan and brake

B = Operation with integral fan and brake control "Holding current reduction"

C = operation with blower

# g500-H helical geared motors

## Project planning

### Technical data at a glance

The following tables contain the most important data of the gearbox with the motors that can be attached for an approximate dimensioning process of a geared motor. Detailed information can be found in the following chapters.

The data given in the tables apply to

- input speed  $n_1 = 1400$  r/min
- application factor  $c = 1.0$

In order to calculate the exact ratio, the number of teeth  $z_g$  (driven) can be divided by the number of teeth  $z_t$  (driving). These are rounded values.

The data for the max. radial force refer to

- foot mounting (VBR)
- normal storage
- application factor  $c = 1.3$

For further designs see the "Technical data" chapter.

- The rated torque can be gathered from the last digits of the product name e.g. g500-H45 (45 Nm).

### g500-H45, 2-stage gearboxes

### Gearbox with adapter

The gearboxes with adapter are available for mounting the following motors:

- Three-phase AC motor according to IEC 72/DIN 42948 with FT/FF flange mounting
- Three-phase AC motor according to NEMA with C/TC flange mounting
- Servo motors with FT/FF flange mounting according to IEC 72/DIN 42948

### Adapter for three-phase AC motors

#### Adapter

- For three-phase AC motors according to IEC 72/DIN 42948
- For three-phase AC motors according to NEMA C
- Two-bearing shaft
- Coupling half on the gearbox side integrated in the shaft

#### Spider (ring gear)

- Torsionally rigid
- Conformal
- Low backlash (with clamping hub / backlash-free clamping ring hub)

#### Coupling hub

##### Standard:

- Coupling hub with keyway for motor shafts according to IEC
- Optional coupling hubs for frequent shocks and load alternations or reduced clutch backlash:
- Clamping hub with tangential terminal screw for motor shafts with featherkey, backlash-free
  - Clamping ring hub for motor shafts without slot, backlash-free

31 - Permissible drive power and output torques.

### Gearbox with adapter

#### Adapter for three-phase AC motors

- The power information and motor sizes refer to 4-pole IEC standard motors.

## Project planning

### Surface and corrosion protection

For optimum protection of geared motors against ambient conditions, the surface and corrosion protection system (OKS) offers tailor-made solutions.

Various surface coatings combined with other protective measures ensure that the geared motors operate reliably even at high air humidity, in outdoor installations or in the presence of atmospheric impurities. Any colour from the RAL Classic collection can be chosen for the top coat. The geared motors are also available unpainted (no surface and corrosion protection).

Surface and corrosion protection	Applications	Product				
		g500-H45 ... H450 g500-S130 ... S660 g500-B45 ... B450	g500-H600 ... H3000 g500-S950 ... S4500 g500-B600 ... B4300	g500-H5000 ... H14000 g500-S8000 ... S19000 g500-B8000 ... B20000

# g500-H helical geared motors

## Project planning

### Lubricants

Lenze gearboxes and geared motors are ready for operation on delivery and are filled with lubricants specific to both the drive and the design. The mounting position and design specified in the order are key factors in choosing the volume of lubricant.

The amount and type of lubricant contained in the gearbox are given on the nameplate.

The following gearboxes are lubricated for life:

- helical gearboxes g500-H45 ... 210

### Lubricant table

The following lubricants are recommended:

Mode	CLP 220	CLP 460	CLP HC 220
Ambient temperature [°C]	0 ... +40		-25 ... +50
Specification	Mineral oil with EP additives		Synthetic oil (polyalphaolefins basis)
Changing interval	16000 operating hours After 3 years at the latest Oil temperature 70 °C		25000 operating hours After 4 years at the latest Oil temperature 70 °C

Mode	CLP HC 320	CLP HC 220 USDA H1	CLP PG 460 USDA H1
Ambient temperature [°C]	-25 ... +50	-20 ... +40	
Specification	Synthetic oil (polyalphaolefins basis)		Synthetic oil (polyglycol basis)
Changing interval	25000 operating hours After 4 years at the latest Oil temperature 70 °C	16000 operating hours After 3 years at the latest Oil temperature 70 °C	
Fuchs	Renolin Unisyn CLP 320 XT 320	Cassida Fluid GL 220	Cassida Fluid WG 460
Klüber	Klübersynth GEM 4-320 N	Klüberoil 4 UH1-220 N	Klüberoil UH1 6-460
Shell	Shell Omala S4 GX HD 320		

- Please contact your Lenze sales office if you are operating at ambient temperatures in areas up to < -20 °C bzw. > or up to +40°C.

## 6.3

### Shaft sealing rings

By default, the gearboxes come with NBR shaft sealing rings at the output end. At high speed and unfavourable ambient conditions such as high temperature, reduced circulation of air etc., Lenze recommends the use of FKM (Viton) shaft sealing rings.

Please consider this in your order.

# g500-H helical geared motors

## Project planning

---

### Ventilation

#### Non-ventilated gearboxes

No ventilation is required for the gearboxes g500-H45 ...H210.

#### Ventilated gearboxes

The gearbox g500-H210 can be optionally ordered with breather elements.

From g500-H320 onwards, the gearboxes are supplied with a breather element as standard.

#### Gearbox in combined mounting position

For reducing the number of versions, the gearboxes can also be ordered in a combined mounting position:

- g500-H45 in mounting position ABCDEF
- g500-H100 ... H450 in mounting position AEF

In these gearboxes, the lubricant amount has been optimised for the use in different mounting positions. If required, the breather elements are loosely enclosed and have to be mounted before commissioning depending on the mounting position.

A gearbox can be used for several mounting positions.

- In the European Union, the ErP Directive stipulates minimum efficiency levels for three-phase AC motors. Geared three-phase AC motors that do not conform with this Directive do not meet CE requirements and must not be marketed in the European Economic Area. For further information about the ErP Directive, the efficiency regulations in other countries and the Lenze products concerned, please refer to the brochure "International efficiency directives for three-phase AC motors".

### Permissible radial and axial forces at output

#### Permissible radial force

$$F_{rad,perm} = f_w \times F_{rad,max}$$

► If  $F_{rad}$  and  $F_{ax} \neq 0$ , please contact Lenze.

#### Permissible axial force

If there is no radial force, the maximum permissible axial force is 50 % of the table value  $F_{rad,max}$

# g500-H helical geared motors

## Technical data

### Permissible radial and axial forces at output

The values given in the table refer to the center shaft end force application point and are minimum values calculated according to the most unfavourable conditions (force application angle, mounting position, direction of rotation). The values were calculated for the motor/gearbox combination with a load capacity of  $c= 1.3$  and an input speed of 1400 r/min.

In case of different operating conditions, considerably higher forces can be transmitted. Please contact Lenze.

## Selection tables, notes

### Notes on the selection tables with 4-pole motors

The selection tables show the available combinations of gearbox type, number of stages, ratio and motor. They are used only to provide basic orientation.

The following legend indicates the structure of the selection tables.

**Rated power  $P_{rated}$  of the drive motor depending on the rated frequency**

50 Hz:  $P_N = 0.75$  kW  
87 Hz:  $P_N = 1.35$  kW

**2-stufige Getriebe** ← **Number of the gear stage of the gearbox**

**Torque diagram**

Mains operation 400 V, 50 Hz			Inverter operation										i	Product		
$n_2$ [r/min]	$M_2$ [Nm]	c	5 Hz -		- 20 Hz		- 50 Hz (1:10)			- 87 Hz (1:17.4)				g500	m5□□	
$n_{22}$ [r/min]	$M_{22}$ [Nm]		$n_{22}$ [r/min]	$M_{22}$ [Nm]	$n_{21}$ [r/min]	$M_2$ [Nm]	$n_2$ [r/min]	$M_2$ [Nm]	c	$n_2$ [r/min]	$M_2$ [Nm]	c				
444	16	4.3	44	12	184	16	444	16	4.3	784	16	3.5	3.267	-H140	50-P80/M4	
432	16	3.9	43	12	179	16	432	16	3.9	763	16	3.2	3.354	-H100	50-P80/M4	

**Load capacity  $c$  of the gearbox**  
 $c$  is the ratio between the permissible rated torque of the gearbox and the rated torque of the three-phase AC motor (converted to the driven shaft).  
 $c$  must be always higher than the service factor  $k$  determined for the application  $k$ .

$$c = \frac{M_{2,zul}}{M_{1N} \cdot i \cdot \eta_{Getr}} > k$$

**Mains operation**  
Output speed  $n_2$   
Output torque  $M_2$

**Inverter operation**  
The speed and torque data are valid for self-ventilated and forced ventilated drives. Forced ventilated drives can always output the torque  $M_2$  in the entire setting ranges. In the case of self-ventilated drives, a reduction to  $M_{22}$  is required in the lower speed range.

**Ratio  $i$**

**Product Gearbox**

**Product Motor**

**Page number for dimensions**

### Motor voltages

The power values and torques indicated in the selection tables refer to the following motor voltages:

- 50 Hz :  $\Delta$  230 V / Y 400 V
- 87 Hz : 400 V

### Operation at 87 Hz

In 87 Hz operation, the three-phase AC motor (which is designed for a voltage of  $\Delta$  230 V / Y 400 V at 50 Hz) is operated on an inverter with 400 V rated voltage in a delta connection. It is important to note here that the inverter must be configured for 87Hz output.

This offers the following advantages over 50 Hz operation:

- the setting range of the motor is increased by a factor of 1.73.
- the motor can then provide around 1.73 times greater output, which in turn allows a smaller and more affordable motor to be selected for the application.
- the efficiency of the motor is also improved.

## Dimensions, notes

### Notes on the dimensions

The following legend shows the layout of the dimension sheets.

### Product Motor

			MD□MA□□				
			063-12	063-32	063-42	071-32	071-42
Gesamtlänge	L	[mm]	←	326			346
Länge Motor	LB	[mm]	←	183			203
Länge Motoranbauten	ΔL	[mm]	←	170			165
Motordurchmesser	AC	[mm]	←	123			139
Abstand Motor/Anschluss	AD	[mm]	←	100			109

Distance of motor centre to the end of terminal box

Motor diameter

Total length of the drive without built-on accessories

Motor length without built-on accessories

Additional length of the built-on accessories (longest version)

- If the mounting area (foot support) towards the motor is longer than the gearbox foot, some motors collide with the mounting area!

# g500-S shaft-mounted helical geared motors

## General information

### Product information

In combination with three-phase AC motors, our shaft-mounted helical gearboxes form a compact and powerful drive unit. Numerous options at the input and output end provide for the drive to be exactly adapted to your application.

The slim shaft-mounted helical gearboxes feature high reliable radial forces, closely stepped gear reductions and a low backlash. They are available in 2-stage and 3-stage design with a torque up to 19000 Nm and a ratio of up to  $i=430$ .

### Three-phase AC motors as a basis for geared motors

In a power range of 0.12 to 55 kW, Lenze offers inverter-compatible three-phase AC motors for comprehensive tasks. These drives come in different efficiency classes and can be used for the versions required for the versions required for open-loop or closed-loop controlled inverter operation.

- IE1 motors up to a power of 0.55 kW
- IE3 motors from 0.75 kW to 55 kW

### Versions

- Slimline design saves installation space of the machine
- Solid shaft, hollow shaft and shrink disc for direct integration into the machine
- High accuracy with axial output provide for the highest efficiency

### Customer benefit:

- Different efficiency classes for the greatest economic benefit
- Space-saving thanks to compact direct attachment to Lenze gearboxes
- Can be used universally for a wide range of machine tasks due to the market-oriented modular system

## General information

### Equipment

#### Overview

The equipment includes all the options available as standard and all the built-on accessories of the product.

#### Standard design

- ▶ For the m540 motor, only temperature monitoring with PTC is available.
- ▶ The gearboxes g500-S950 ... S19000 comes with a housing that is always designed with foot.

 11 - Detailed information on housing type.

# g500-S shaft-mounted helical geared motors

## General information

### Equipment

#### Mounting position, position of system components

- ▶ In the following graphics, the terminal box in position 2 is colour-coded. If the mounting position (A ... F) changes, the terminal box positions 2 ... 5 are rotated accordingly.
- ▶ To reduce the number of different versions, the gearboxes can also be ordered with combined mounting positions:  
- g500-S130 ... S660 in mounting position AEF

- ▶ For details regarding the cable entry see motor chapter/product extensions.

# g500-S shaft-mounted helical geared motors

General information

## Equipment

Mounting position, position of system components

Shrink disc position 1 or 6

- ▶ Solid shaft and flange are only possible in position 6.

### General information about the data provided in this catalogue

The powers, torques and speeds specified in this catalogue are rounded values and are valid under the following conditions:

- Operating time/day = 8 h (100% OT)
- Duty class I for up to 10 switching operations/h
- Mounting positions and designs in this catalogue
- Standard lubricant
- $T_{amb} = 20\text{ °C}$  for gearboxes,  
 $T_{amb} = 40\text{ °C}$  for motors (in accordance with EN 60034)
- Site altitude  $\leq 1000\text{ m amsl}$
- The selection tables provide the permissible mechanical powers and torques. For notes on the thermal power limit, see chapter drive dimensioning.
- The rated power specified for motors and geared motors applies to operating mode S1 (in accordance with EN 60034).

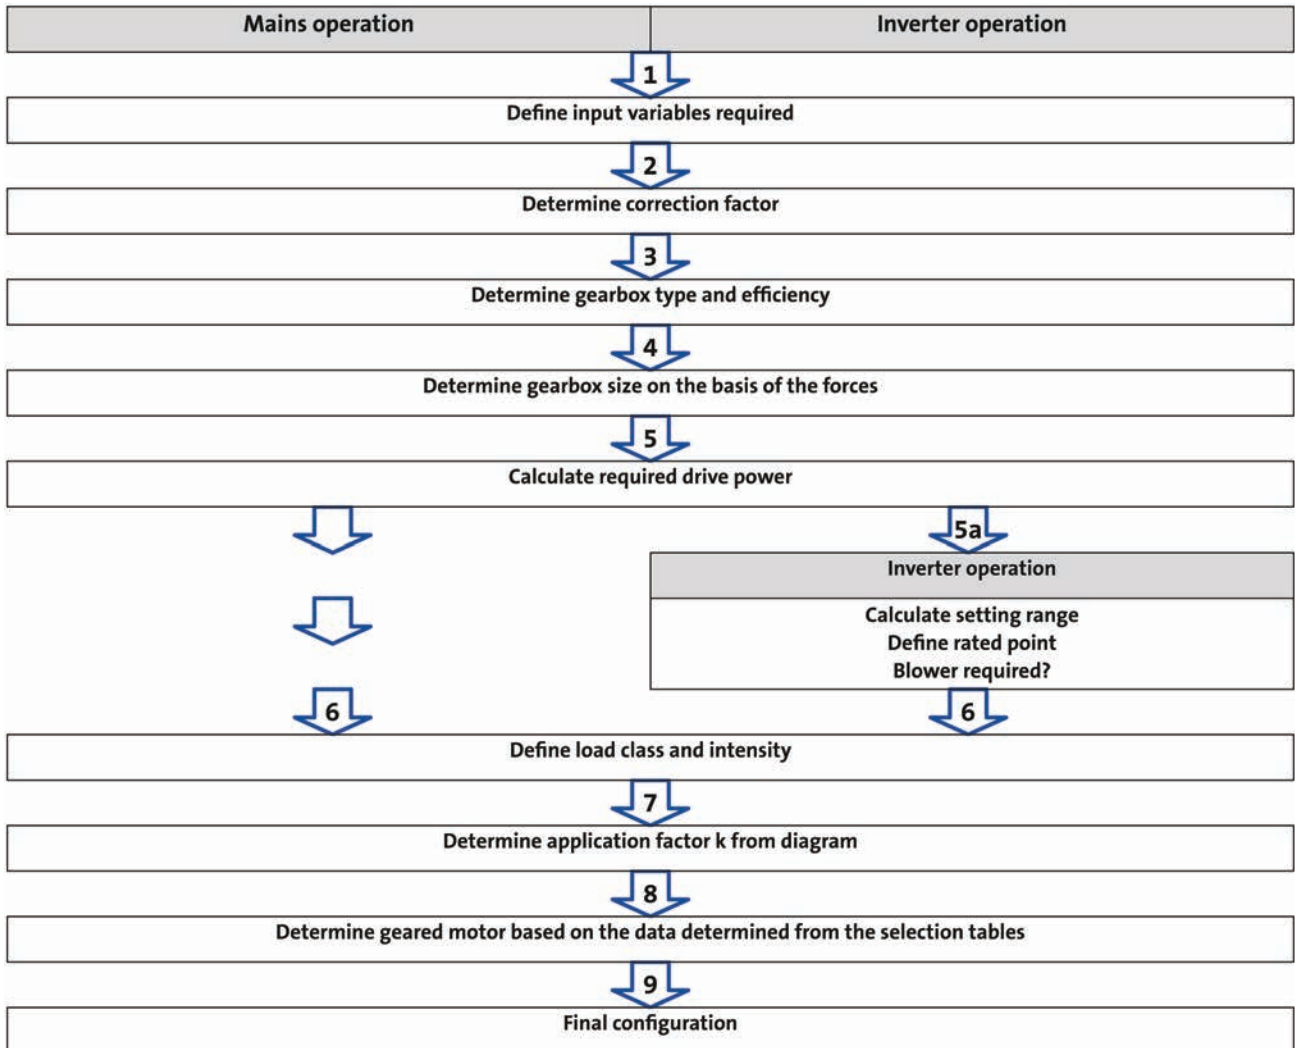

Under different operating conditions, the values obtained may vary from those listed here.

In the case of extreme operating conditions, please consult your Lenze sales office.

## Procedure of a configuration process

### Workflow

You can use our configuring software Drive Solution Designer for precise drive dimensioning.

The Drive Solution Designer helps you to carry out a fast and high-quality drive dimensioning.

The software includes well-founded and proven knowledge on drive applications and electro-mechanical drive components.

Please contact your Lenze sales office.

### Procedure of a configuration process

#### 1 required input variables

Load torque		$M_{L,max} =$	[Nm]
	In inverter operation	$M_{L,min} =$	[Nm]
Load speed		$n_{L,max} =$	[r/min]
	In inverter operation	$n_{L,min} =$	[r/min]
External moments of inertia		$J_{ext} =$	[kgcm <sup>2</sup> ]
Operating time / day		BD =	[h]
Switching operations per h		$S_h =$	[1/h]
Runtime for $M_{L,max}$	In inverter operation		[%]

#### 2 determine correction factor

Operating modes and operating time						
S1	ED	[%]	100			
	$k_L =$		1.0			
S2	ED	[%]	10	30	60	90
	$k_L =$		1.4 - 1.5	1.15 - 1.2	1.07 - 1.1	1.0 - 1.05
S3	ED	[%]	15	25	40	60
	$k_L =$		1.4 - 1.5	1.3 - 1.4	1.15 - 1.2	1.05 - 1.1
S6	ED	[%]	15	25	40	60
	$k_L =$		1.5 - 1.6	1.4 - 1.5	1.3 - 1.4	1.15 - 1.2
Site altitude						
	H	[m]	≤ 1000	≤ 2000	≤ 3000	≤ 4000
	$k_H =$		1	0.95	0.9	0.85
Ambient temperature						
	$T_U =$	[°C]	≤ 40	≤ 45	≤ 50	≤ 55
	$k_{TU} =$		1	0.95	0.9	0.8

30 - Operating modes

# g500-S shaft-mounted helical geared motors

## Project planning

### Procedure of a configuration process

#### 3 determine gearbox type and efficiency

Gearbox type			Axial gearboxes		Right-angle gearboxes
			Helical gearbox	Shaft-mounted	Bevel gearbox
Product			g500-H	g500-S	g500-B
Gearbox efficiency	2-stage gearboxes	$\eta_G$	0.96	0.96	0.96
	3-stage gearboxes	$\eta_G$	0.95	0.95	0.95

#### 4 determine gearbox size based on the forces on the output

Transmission element		Gear wheels	Sprockets	Toothed belt pulleys (depending on the initial stress)	Narrow V-belt (depending on the initial stress)
Additional radial force factor	$f_z =$	$\geq 17$ teeth = 1.0 $< 17$ teeth = 1.15	$\geq 20$ teeth = 1.0 $< 20$ teeth = 1.25 $< 13$ teeth = 1.4	With belt tightener = 2.0 - 2.5 Without belt tightener = 2.5 - 3.0	1.5 - 2.0
		Calculation		Check	
Radial force	[N]	$F_{rad} = 2000 \times \frac{M_{L,max} \times f_z}{d_w}$		$F_{rad} \leq f_w \times F_{rad,max}$	
Axial force	[N]			$F_{ax} \leq F_{rad,max} \times 0.5$	

$d_w$  = effective diameter [mm] transmission element  
 $f_w$  = additional load factor

- For permissible radial and axial forces and additional load factor see the "Technical data" chapter

#### 5 calculate drive power

		Calculation	
Drive power required	[kW]	$P_1 = \frac{M_{L,max} \times \eta_{L,max}}{9549 \times k_L \times k_H \times k_{Tu} \times \eta_g}$	

$k_L$  = Correction factor - operating mode  
 $k_H$  = correction factor - installation height  
 $k_{Tu}$  = correction factor - ambient temperature

### Procedure of a configuration process - mains operation

#### 6 calculate intensity and determine duty class

Load class	Load type	Intensity
I	Smooth operation, small or light jolts	$F_I \leq 1.25$
II	Uneven operation, average jolts	$1.25 < F_I \leq 4$
III	Uneven operation, severe jolts and/or alternating load	$F_I > 4$

#### 31 - Duty classes

	Calculation	
Intensity	$F_I = \frac{\frac{J_L + J_M + J_B + J_Z}{i^2}}{J_M + J_B + J_Z}$	

$i$  = gearbox ratio

$J_L$  = moment of inertia of the load

$J_M$  = moment of inertia of the motor

$J_B$  = moment of inertia of the brake

$J_Z$  = additional moment of inertia (handwheel, 2nd shaft end ...)

#### 7 determine application factor $k$ from diagram

#### 34 - Load capacity and application factor

# g500-S shaft-mounted helical geared motors

## Project planning

### Procedure of a configuration process - mains operation

8 determine geared motor based on the data determined from the selection tables

Selection table		Check
Drive power $P_N$	[kW]	$P_1 \leq P_N$
Output speed $n_2$	[r/min]	$n_{L,max} \approx n_2$
Output torque $M_2$	[Nm]	$M_{L,max} \leq M_2$
Load factor $c$		$k \leq c$
Order information		Example
Number of stages		2
Ratio $i$		3.267
Product gearbox		g500-H140
Product motor		m550-P80/M4

34 - Load capacity and application factor

#### Example: structure of a selection table

50 Hz:  $P_N = 0.75$  kW ← Rated power  $P_N$

2-stage gearboxes ← Number of the gear stage

Mains operation 400 V, 50 Hz			Inverter operation										i	Product		
$n_2$ [r/min]	$M_2$ [Nm]	c	5 Hz -		- 20 Hz		- 50 Hz (1:10)			- 87 Hz (1:17.4)				g500	m5□□

## Procedure of a configuration process - inverter operation

### 5a calculate range of adjustment and determine rated point

		Calculation	
Setting range		$V = \frac{n_{L,max}}{n_{L,min}}$	
Setting range	Motor with integral fan	$\leq 2.5$ (20 ... 50 Hz)	$\leq 4.35$ (20 ... 87 Hz)
	Motor with blower	$\leq 10$ (5 ... 50 Hz)	$\leq 17.4$ (5 ... 87 Hz)
Rated point at		50 Hz	87 Hz

### 6 calculate intensity and determine duty class

		Calculation	
Intensity	$M_I = \frac{M_{L,max}}{M_{L,min}}$	For alternating load, select load class III!	
Load class	Load type	Intensity	
I	Smooth operation, small or light jolts	$M_I \leq 1.5$	
II	Uneven operation, average jolts	$1.5 < M_I \leq 2$	
III	Uneven operation, severe jolts and/or alternating load	$2 < M_I \leq 2.5$	

31 - Duty classes

### 7 determine application factor k from diagram

34 - Load capacity and application factor

### Standards

#### Operating modes

Operating modes S1 ... S10 as specified by EN 60034-1 describe the basic stress of an electrical machine.

In continuous operation a motor reaches its permissible temperature limit if it outputs the rated power dimensioned for continuous operation. However, if the motor is only subjected to load for a short time, the power output by the motor may be greater without the motor reaching its permissible temperature limit. This behaviour is referred to as overload capacity.

Depending on the duration of the load and the resulting temperature rise, the required motor can be selected reduced by the overload capacity.

#### The most important operating modes

Continuous operation S1	Short-time operation S2
<p>Operation with a constant load until the motor reaches the thermal steady state. The motor may be actuated continuously with its rated power.</p>	<p>Operation with constant load; however, the motor does not reach the thermal steady state. During the following standstill, the motor winding cools down to the ambient temperature again. The increase in power depends on the load duration.</p>
Intermittent operation S3	Non-intermittent periodic operation S6
-	-

# g500-S shaft-mounted helical geared motors

## Project planning

### Standards

#### Duty classes

Depending on the load type, the duty classes or impacts are divided as follows:

Duty class	Load type
I	Smooth operation, small or light jolts
II	Uneven operation, average jolts
III	Uneven operation, severe jolts and/or alternating load

In order to support you in classifying your driven machine regarding the right duty class, the following shows sample applications with the corresponding duty class. Depending on, for instance, the operating frequency, driven machines can also have a higher impact. In case of uncertainties, please contact your Lenze sales office.

Drive	Duty class
Construction machines	II
Chemical industry	II
Conveyors	II
Fans	II
Plastics industry	II
Wood working	III
Hoists	III
Metal working	III
Food	II
Paper industry	III
Stones	III
Textile industry	II

# g500-S shaft-mounted helical geared motors

## Project planning

### Standards

#### Degrees of protection

The degree of protection indicates the suitability of a motor for specific ambient conditions with regard to humidity as well as the protection against contact and the ingress of foreign particles. The degrees of protection are classified by EN 60529.

The first code number after the code letters IP indicates the protection against the ingress of foreign particles and dust.

The second code number refers to the protection against the ingress of humidity.

Code number	Degree of protection	Code number	Degree of protection
0	No protection	0	No protection
1	Protection against the ingress of foreign particles $d > 50$ mm. No protection in the case of deliberate access	1	Protection against vertically dripping water (dripping water).
2	Protection against medium-sized foreign particles, $d > 12$ mm, keeping away fingers or similar	2	Protection against diagonally falling water (dripping water), $15^\circ$ compared to normal service position.
3	Protection against small foreign particles $d > 2.5$ mm. Keeping away tools, wires and the like	3	Protection against spraying water, up to $60^\circ$ to the vertical
4	Protection against granular foreign particles, $d > 1$ mm, keeping away tools, wires and the like	4	Protection against spraying water from all directions.
5	Protection against dust deposits (dust-protected), complete protection against contact.	5	Protection against water jets from all directions.
6	Protection against the ingress of dust (dust-proof), complete protection against contact.	6	Protection against choppy seas or heavy water jets (flood protection).

# g500-S shaft-mounted helical geared motors

## Project planning

### Thermal power limit

The thermal power limit, defined by the heat balance, limits the permissible permanent gearbox power.

It is affected by:

- the churning losses in the lubricant. These are determined by the mounting position and the circumferential speed of the gears;
- the load and the speed;
- the ambient conditions: temperature, air circulation, input or dissipation of heat via shafts and the foundations.

We ask you to make a thermal check with the Drive Solution Designer (DSD) or contact the Lenze office responsible for you

- if the input speed  $n_1 > 1500$  r/min is exceeded in case of the gearbox ratios given in the following (can be e.g. recognised by the empty cells in the selection tables):

g500 thermal power limit	
Product	Ratio i
g500-H850 ... H3000	≤ 10
g500-S2100 ... S4500	≤ 16
g500-B1500 ... B4300	≤ 25

g500 thermal power limit	
Product	Ratio i
g500-H5000 ... H14000	≤ 25
g500-S8000 ... S19000	≤ 40
g500-B8000 ... B20000	≤ 60

- If the drive speeds mentioned in the following will be exceeded as a function of the mounting position:

g500 thermal power limit			
Product	Mounting position A	Mounting position A, B, E, F	Mounting position C, D
MD□MA□□063 ... 071 m550-P80 ... P100	4000 r/min	3500 r/min	3000 r/min
m550-P112 ... P132	3000 r/min	2600 r/min	1500 r/min
m550-P160 ... P180	2000 r/min	1800 r/min	1500 r/min
m540-P90 ... P250	1500 r/min	1500 r/min	1500 r/min

- ▶ For a short period of time up to 5 min, 30 % higher speeds are permissible

### Possible ways of extending the application area

- Synthetic lubricant (option)
- Shaft sealing rings made from FKM material/Viton (option)
- Reduction in lubricant quantity (after consultation with Lenze)
- Cooling of the geared motor by means of air convection on the machine/system

# g500-S shaft-mounted helical geared motors

## Project planning

### Load capacity and application factor

#### Load capacity $c$ of gearboxes

Rated value for the load capacity of Lenze geared motors.

- $c$  is the ratio of the permissible rated torque of the gearbox to the rated torque supplied by the drive component (e.g. the built-in Lenze motor).
- The value of  $c$  must always be greater than the value of the application factor  $k$  calculated for the application.

Required:  $c \geq k$

#### Application factor $k$ (according to DIN 3990)

Takes into account the influence of temporally variable loads which are actually present during the anticipated operating time of gearboxes and geared motors.

$k$  is determined by:

- the type of load
- the load intensity
- temporal influences

- ▶  $S_h$  = switchings/h
- ▶ — Three-phase AC motors MD□MA
- ▶ - - - Three-phase AC motors m240/m540/m550

### Operational performance of three-phase AC geared motors

The g500 geared motors can be actuated directly on the mains or via an inverter. When actuated in mains operation, the motor runs at a fixed speed, for inverter operation the speed is variable. Thanks to their high degree of protection, the robust three-phase drives can be basically used in a variety of applications.

#### Mains operation

During mains operation, when switched on, the three-phase AC motor starts up according to the speed-torque characteristic. It passes through this characteristic until it reaches its stable operating point. This operating point has been reached if the load torque or rated torque ( $M_{\text{rated}}$ ) is lower than the starting torque ( $M_{\Delta}$ ) and pull-up torque ( $M_S$ ). The rated speed ( $n_{\text{rated}}$ ) of the drive is always lower than the calculated synchronous speed ( $n_S$ ). The difference between rated speed and synchronous speed relating to the synchronous speed is referred to as the "slip".

### Operational performance of three-phase AC geared motors

#### Operation on the inverter

An inverter enables energy-efficient operation of a system in virtually all application cases. The various operating modes, which can be created by making just a few simple settings, facilitate this. The following characteristics and corresponding specifications listed on the following pages can be used to calculate the optimum operating mode during the project planning phase.

#### Standard setting

In its initial state when delivered, the inverter is set up for basic operation with a three-phase AC motor with vector control. When operated in this mode, the rated torque of the motor is available in a setting range up to 50 Hz.

#### Extended setting range up to 87 Hz

If the V/f reference point on the inverter is set to 87 Hz, the rated torque can be used across an extended setting range. Here, a 230/400V motor is for example used and operated in a delta layout with a 400V inverter. The setting range is then increased by 40 %. The inverter must be dimensioned for a rated motor current of 230 V.

# g500-S shaft-mounted helical geared motors

Project planning

## Operational performance of three-phase AC geared motors

### Torque derating at low motor frequencies

The diagram shows the motor frame size-dependent torque reduction for self-ventilated motors, taking the thermal behaviour during actuation of the inverter into consideration.

A = Operation with integral fan and brake  
 B = Operation with integral fan and brake control "Holding current reduction"

C = operation with blower

# g500-S shaft-mounted helical geared motors

## Project planning

### Technical data at a glance

The following tables contain the most important data of the gearbox with the motors that can be attached for an approximate dimensioning process of a geared motor. Detailed information can be found in the following chapters.

The data given in the tables apply to

- input speed  $n_1 = 1400$  r/min
- application factor  $c = 1.0$

In order to calculate the exact ratio, the number of teeth  $z_g$  (driven) can be divided by the number of teeth  $z_t$  (driving). These are rounded values.

The data for the max. radial force refer to

- solid shaft without flange
- normal storage
- application factor  $c = 1.3$

For further designs see the "Technical data" chapter.

- The rated torque can be gathered from the last digits of the product name e.g. g500-S130 (130 Nm).

### Gearbox with adapter

The gearboxes with adapter are available for mounting the following motors:

- Three-phase AC motor according to IEC 72/DIN 42948 with FT/FF flange mounting
- Three-phase AC motor according to NEMA with C/TC flange mounting
- Servo motors with FT/FF flange mounting according to IEC 72/DIN 42948

### Adapter for three-phase AC motors

#### Adapter

- For three-phase AC motors according to IEC 72/DIN 42948
- For three-phase AC motors according to NEMA C
- Two-bearing shaft
- Coupling half on the gearbox side integrated in the shaft

#### Spider (ring gear)

- Torsionally rigid
- Conformal
- Low backlash (with clamping hub / backlash-free clamping ring hub)

#### Coupling hub

Standard:

- Coupling hub with keyway for motor shafts according to IEC
- Optional coupling hubs for frequent shocks and load alternations or reduced clutch backlash:
- Clamping hub with tangential terminal screw for motor shafts with featherkey, backlash-free
  - Clamping ring hub for motor shafts without slot, backlash-free

  38 - Permissible drive power and output torques.

# g500-S shaft-mounted helical geared motors

## Project planning

### Gearbox with adapter

#### Adapter for three-phase AC motors

- The power information and motor sizes refer to 4-pole IEC standard motors.

## Project planning

### Surface and corrosion protection

For optimum protection of geared motors against ambient conditions, the surface and corrosion protection system (OKS) offers tailor-made solutions.

Various surface coatings combined with other protective measures ensure that the geared motors operate reliably even at high air humidity, in outdoor installations or in the presence of atmospheric impurities. Any colour from the RAL Classic collection can be chosen for the top coat. The geared motors are also available unpainted (no surface and corrosion protection).

Surface and corrosion protection	Applications	Product				
		g500-H45 ... H450 g500-S130 ... S660 g500-B45 ... B450	g500-H600 ... H3000 g500-S950 ... S4500 g500-B600 ... B4300	g500-H5000 ... H14000 g500-S8000 ... S19000 g500-B8000 ... B20000		
Without OKS(uncoated) <sup>1)</sup>	<ul style="list-style-type: none"> <li>Indoor installation, no special corrosion protection necessary</li> <li>Paint provided by the customer</li> </ul>	Standard				
OKS-G (primed)	<ul style="list-style-type: none"> <li>Dependent on subsequent top coat applied</li> </ul>	Optional	Optional	Optional		
OKS-S (small)	<ul style="list-style-type: none"> <li>Standard applications</li> <li>Internal installation in heated buildings</li> <li>Air humidity up to 90%</li> </ul>		Standard	Standard		
OKS-M (medium)	<ul style="list-style-type: none"> <li>Internal installation in non-heated buildings</li> <li>Covered, protected external installation</li> <li>Air humidity up to 95%</li> </ul>		Optional		Optional	
OKS-L (large)	<ul style="list-style-type: none"> <li>External installation</li> <li>Air humidity above 95%</li> <li>Chemical industry plants</li> <li>Food industry</li> </ul>			Optional

## Project planning

### Lubricants

Lenze gearboxes and geared motors are ready for operation on delivery and are filled with lubricants specific to both the drive and the design. The mounting position and design specified in the order are key factors in choosing the volume of lubricant.

The amount and type of lubricant contained in the gearbox are given on the nameplate.

The following gearboxes are lubricated for life:

- shaft-mounted helical gearboxes g500-S130 ... 220

### Lubricant table

The following lubricants are recommended:

Mode	CLP 220	CLP 460	CLP HC 220
Ambient temperature [°C]	0 ... +40		-25 ... +50
Specification	Mineral oil with EP additives		Synthetic oil (polyalphaolefins basis)
Changing interval	16000 operating hours After 3 years at the latest Oil temperature 70 °C		25000 operating hours After 4 years at the latest Oil temperature 70 °C
Fuchs	Renolin CLP 220 CLP Plus 220	Renolin CLP 460 CLP Plus 460	Renolin Unisyn CLP 220 XT220
Klüber	Klüberoil GEM 1-220 N	Klüberoil GEM 1-460 N	Klübersynth GEM 4-220 N
Shell	Shell Omala S2 G 220 S2 GX 220	Shell Omala S2 G 460 S2 GX 460	Shell Omala S4 GX HD 220

Mode	CLP HC 320	CLP HC 220 USDA H1	CLP PG 460 USDA H1
Ambient temperature [°C]	-25 ... +50	-20 ... +40	
Specification	Synthetic oil (polyalphaolefins basis)		Synthetic oil (polyglycol basis)
Changing interval	25000 operating hours After 4 years at the latest Oil temperature 70 °C	16000 operating hours After 3 years at the latest Oil temperature 70 °C	
Fuchs	Renolin Unisyn CLP 320 XT 320	Cassida Fluid GL 220	Cassida Fluid WG 460
Klüber	Klübersynth GEM 4-320 N	Klüberoil 4 UH1-220 N	Klüberoil UH1 6-460
Shell	Shell Omala S4 GX HD 320		

- Please contact your Lenze sales office if you are operating at ambient temperatures in areas up to < -20 °C bzw. > or up to +40°C.

### Shaft sealing rings

By default, the gearboxes come with NBR shaft sealing rings at the output end. At high speed and unfavourable ambient conditions such as high temperature, reduced circulation of air etc., Lenze recommends the use of FKM (Viton) shaft sealing rings.

Please consider this in your order.

# g500-S shaft-mounted helical geared motors

## Project planning

---

### Ventilation

#### Non-ventilated gearboxes

No ventilation is required for the gearboxes g500-S130 ... S220

#### Ventilated gearboxes

The gearbox g500-S220 can be optionally ordered with breather elements.

From g500-S400 onwards, the gearboxes are supplied with a breather element as standard.

#### Gearbox in combined mounting position

For reducing the number of versions, the gearboxes can also be ordered in a combined mounting position:

- g500-S130 ... S660 in mounting position AEF

In these gearboxes, the lubricant amount has been optimised for the use in different mounting positions. -H45 in mounting position ABCDEfg500-H100 ... H450 in mounting position AEF In these gearboxes, the lubricant amount has been optimised for the use in different mounting positions. If required, the breather elements are loosely enclosed and have to be mounted before commissioning depending on the mounting position.

A gearbox can be used for several mounting positions.

- In the European Union, the ErP Directive stipulates minimum efficiency levels for three-phase AC motors. Geared three-phase AC motors that do not conform with this Directive do not meet CE requirements and must not be marketed in the European Economic Area. For further information about the ErP Directive, the efficiency regulations in other countries and the Lenze products concerned, please refer to the brochure "International efficiency directives for three-phase AC motors".

# g500-S shaft-mounted helical geared motors

Technical data

## Permissible radial and axial forces at output

### Permissible radial force

$$F_{rad,perm} = f_w \times F_{rad,max}$$

► If  $F_{rad}$  and  $F_{ax} \neq 0$ , please contact Lenze.

### Permissible axial force

If there is no radial force, the maximum permissible axial force is 50 % of the table value  $F_{rad,max}$

—— Solid shaft  
 - - - Hollow shaft

# g500-S shaft-mounted helical geared motors

## Technical data

### Permissible radial and axial forces at output

The values given in the table refer to the center shaft end force application point and are minimum values calculated according to the most unfavourable conditions (force application angle, mounting position, direction of rotation). The values were calculated for the motor/gear-box combination with a load capacity of  $c= 1.3$  and an input speed of 1400 r/min.

In case of different operating conditions, considerably higher forces can be transmitted. Please contact Lenze.

- A hollow shaft with shrink disc requires a check by Lenze.

## Technical data

### Selection tables, notes

#### Notes on the selection tables with 4-pole motors

The selection tables show the available combinations of gearbox type, number of stages, ratio and motor. They are used only to provide basic orientation.

The following legend indicates the structure of the selection tables.

**Rated power  $P_{rated}$  of the drive motor depending on the rated frequency**

50 Hz:  $P_N = 0.75$  kW  
87 Hz:  $P_N = 1.35$  kW

**2-stufige Getriebe** ← **Number of the gear stage of the gearbox**

**Torque diagram**

Mains operation 400 V, 50 Hz			Inverter operation										i	Product		
$n_2$ [r/min]	$M_2$ [Nm]	c	5 Hz -		- 20 Hz		- 50 Hz (1:10)			- 87 Hz (1:17.4)				g500	m5□□	
$n_{22}$ [r/min]	$M_{22}$ [Nm]		$n_{22}$ [r/min]	$M_{22}$ [Nm]	$n_{21}$ [r/min]	$M_2$ [Nm]	$n_2$ [r/min]	$M_2$ [Nm]	c	$n_2$ [r/min]	$M_2$ [Nm]	c				
396	18	3.6	40	14	164	18	396	18	3.6	699	18	3.0	3.661	-S130	50-P80/M4	
289	24	3.2	29	19	120	24	289	24	3.2	510	25	2.6	5.021	-S130	50-P80/M4	

**Load capacity c of the gearbox**  
c is the ratio between the permissible rated torque of the gearbox and the rated torque of the three-phase AC motor (converted to the driven shaft).  
c must be always higher than the service factor k determined for the application k.

$$c = \frac{M_{2,zul}}{M_{1N} \cdot i \cdot \eta_{Getr}} > k$$

**Mains operation**  
Output speed  $n_2$   
Output torque  $M_2$

**Inverter operation**  
The speed and torque data are valid for self-ventilated and forced ventilated drives. Forced ventilated drives can always output the torque  $M_2$  in the entire setting ranges. In the case of self-ventilated drives, a reduction to  $M_{22}$  is required in the lower speed range.

**Ratio i**

**Product Gearbox**

**Product Motor**

**Page number for dimensions**

#### Motor voltages

The power values and torques indicated in the selection tables refer to the following motor voltages:

- 50 Hz :  $\Delta$  230 V / Y 400 V
- 87 Hz : 400 V

#### Operation at 87 Hz

In 87 Hz operation, the three-phase AC motor (which is designed for a voltage of  $\Delta$  230 V / Y 400 V at 50 Hz) is operated on an inverter with 400 V rated voltage in a delta connection. It is important to note here that the inverter must be configured for 87Hz output.

This offers the following advantages over 50 Hz operation:

- the setting range of the motor is increased by a factor of 1.73.
- the motor can then provide around 1.73 times greater output, which in turn allows a smaller and more affordable motor to be selected for the application.
- the efficiency of the motor is also improved.

## Overview

### Torque plate

The torque is usually supported via the foot or the flange. Another simple option is the integrated torque plate at the housing. Here, the torque is supported only via one point and is, among other things, suitable for shaft-mounted gearboxes. Moreover, the suitable rubber buffers provide for a low-tension installation and absorb slight shocks.

The rubber buffers can be ordered optionally.

#### Rubber buffer for torque plate

### Shaft cover

The optional shrink disc cover is provided for the shrink disc to be protected from contact.

#### Shrink disc cover

# g500-B bevel geared motors

## General information

### Product information

In combination with three-phase AC motors, our bevel gearboxes form a compact and powerful drive unit. Numerous options at the input and output end provide for the drive to be exactly adapted to your application.

The efficient bevel gearboxes feature high reliable radial forces, closely stepped gear reductions and a low backlash. They are available in 2-stage and 3-stage design with a torque up to 20000 Nm and a ratio of up to  $i=360$ .

#### Three-phase AC motors as a basis for geared motors

In a power range of 0.06 to 55 kW, Lenze offers inverter-compatible three-phase AC motors for comprehensive tasks. These drives come in different efficiency classes and can be used for the versions required for the versions required for open-loop or closed-loop controlled inverter operation.

- IE1 motors up to a power of 0.55 kW
- IE3 motors from 0.75 kW to 55 kW

#### Versions

- High-efficient right-angle gearbox in a compact design for space-saving installation
- Standardised shaft and flange dimensions for an easy machine integration
- Low backlash and high torsional stiffness provide for exact results in positioning applications

#### Customer benefit:

- Different efficiency classes for the greatest economic benefit
- Space-saving thanks to compact direct attachment to Lenze gearboxes
- Can be used universally for a wide range of machine tasks due to the market-oriented modular system

# g500-B bevel geared motors

## General information

## Equipment

### Overview

The equipment includes all the options available as standard and all the built-on accessories of the product.

- ▶ For the m540 motor, only temperature monitoring with PTC is available.
- ▶ The gearbox g500-B8000 comes with a standard housing type without foot.

 11 - Detailed information on housing type.

# g500-B bevel geared motors

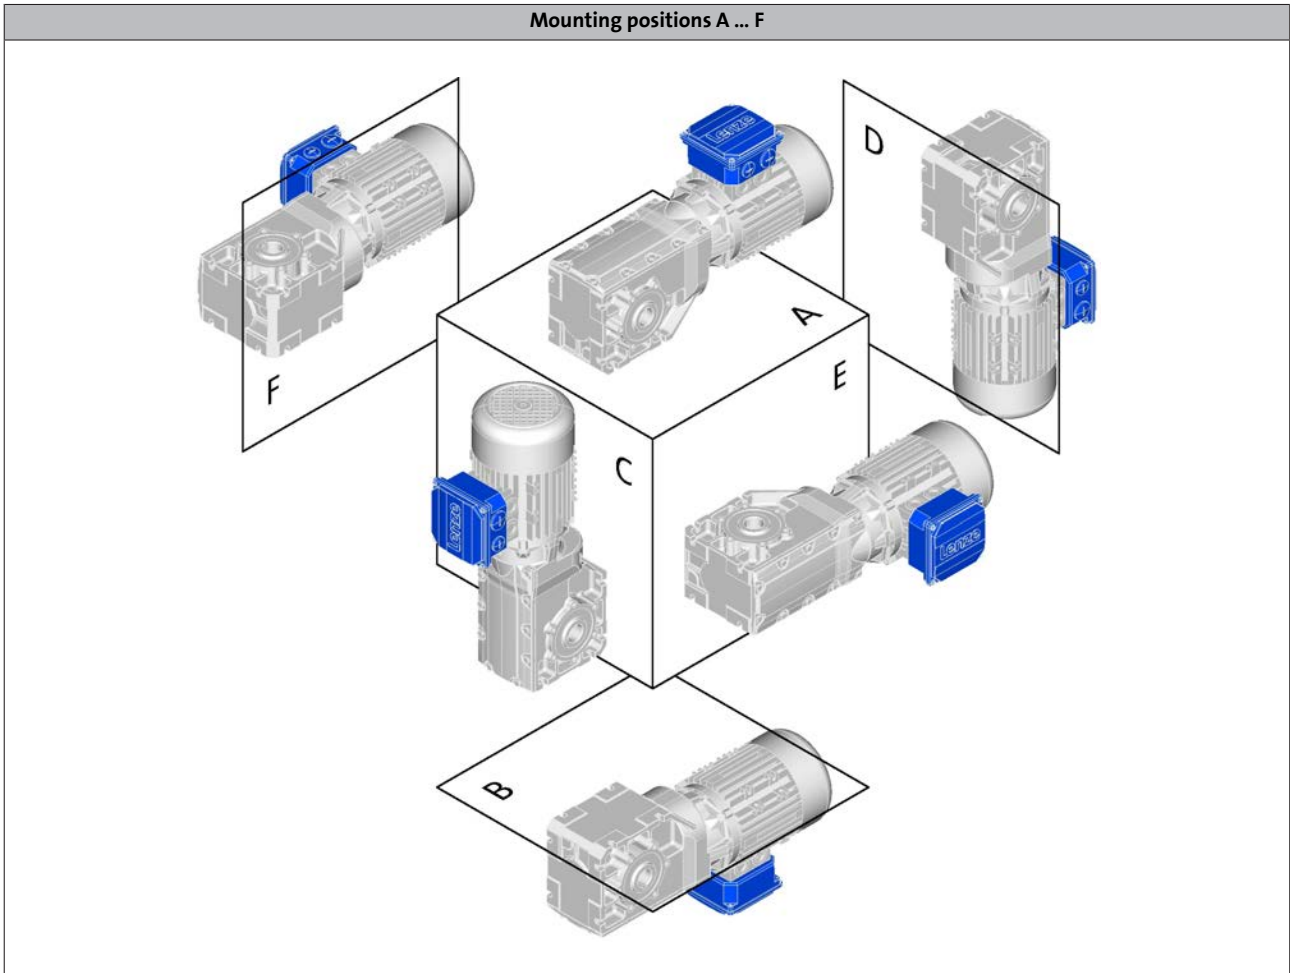

## General information

### Equipment

#### Mounting position, position of system components

- ▶ In the following graphics, the terminal box in position 2 is colour-coded. If the mounting position (A ... F) changes, the terminal box positions 2 ... 5 are rotated accordingly.
- ▶ To reduce the number of different versions, the gearboxes can also be ordered with combined mounting positions:
  - g500-B45 in mounting position ABCDEF
  - g500-B110 ... B450 in mounting position AEF

- ▶ For details regarding the cable entry see motor chapter/product extensions.

### General information about the data provided in this catalogue

The powers, torques and speeds specified in this catalogue are rounded values and are valid under the following conditions:

- Operating time/day = 8 h (100% OT)
- Duty class I for up to 10 switching operations/h
- Mounting positions and designs in this catalogue
- Standard lubricant
- $T_{amb} = 20\text{ °C}$  for gearboxes,  
 $T_{amb} = 40\text{ °C}$  for motors (in accordance with EN 60034)
- Site altitude  $\leq 1000\text{ m amsl}$
- The selection tables provide the permissible mechanical powers and torques. For notes on the thermal power limit, see chapter drive dimensioning.
- The rated power specified for motors and geared motors applies to operating mode S1 (in accordance with EN 60034).

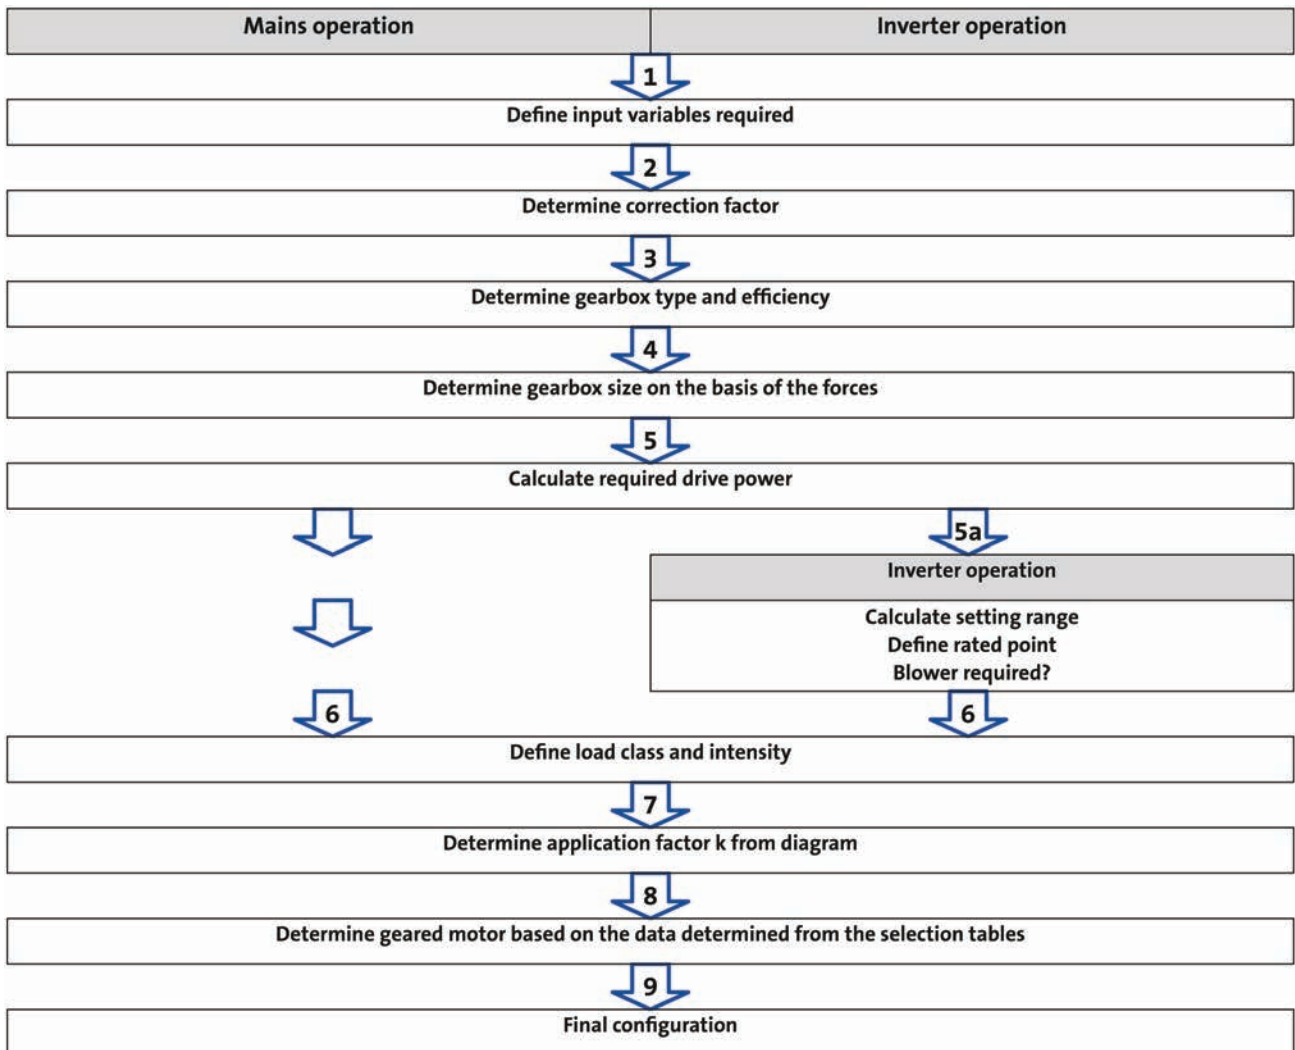

Under different operating conditions, the values obtained may vary from those listed here.

In the case of extreme operating conditions, please consult your Lenze sales office.

## Procedure of a configuration process

### Workflow

You can use our configuring software Drive Solution Designer for precise drive dimensioning.

The Drive Solution Designer helps you to carry out a fast and high-quality drive dimensioning.

The software includes well-founded and proven knowledge on drive applications and electro-mechanical drive components.

Please contact your Lenze sales office.

### Procedure of a configuration process

#### 1 required input variables

Load torque		$M_{L,max} =$	[Nm]
	In inverter operation	$M_{L,min} =$	[Nm]
Load speed		$n_{L,max} =$	[r/min]
	In inverter operation	$n_{L,min} =$	[r/min]
External moments of inertia		$J_{ext} =$	[kgcm <sup>2</sup> ]
Operating time / day		BD =	[h]
Switching operations per h		$S_h =$	[1/h]
Runtime for $M_{L,max}$	In inverter operation		[%]

#### 2 determine correction factor

Operating modes and operating time						
S1	ED	[%]	100			
	$k_L =$		1.0			
S2	ED	[%]	10	30	60	90
	$k_L =$		1.4 - 1.5	1.15 - 1.2	1.07 - 1.1	1.0 - 1.05
S3	ED	[%]	15	25	40	60
	$k_L =$		1.4 - 1.5	1.3 - 1.4	1.15 - 1.2	1.05 - 1.1
S6	ED	[%]	15	25	40	60
	$k_L =$		1.5 - 1.6	1.4 - 1.5	1.3 - 1.4	1.15 - 1.2
Site altitude						
	H	[m]	≤ 1000	≤ 2000	≤ 3000	≤ 4000
	$k_H =$		1	0.95	0.9	0.85
Ambient temperature						
	$T_U =$	[°C]	≤ 40	≤ 45	≤ 50	≤ 55
	$k_{TU} =$		1	0.95	0.9	0.8

  30 - Operating modes

### Procedure of a configuration process

#### 3 determine gearbox type and efficiency

Gearbox type			Axial gearboxes		Right-angle gearboxes
			Helical gearbox	Shaft-mounted	Bevel gearbox
Product			g500-H	g500-S	g500-B
Gearbox efficiency	2-stage gearboxes	$\eta_G$	0.96	0.96	0.96
	3-stage gearboxes	$\eta_G$	0.95	0.95	0.95

#### 4 determine gearbox size based on the forces on the output

Transmission element		Gear wheels	Sprockets	Toothed belt pulleys (depending on the initial stress)	Narrow V-belt (depending on the initial stress)
Additional radial force factor	$f_z =$	$\geq 17$ teeth = 1.0 $< 17$ teeth = 1.15	$\geq 20$ teeth = 1.0 $< 20$ teeth = 1.25 $< 13$ teeth = 1.4	With belt tightener = 2.0 - 2.5 Without belt tightener = 2.5 - 3.0	1.5 - 2.0
		Calculation		Check	
Radial force	[N]	$F_{rad} = 2000 \times \frac{M_{L,max} \times f_z}{d_w}$		$F_{rad} \leq f_w \times F_{rad,max}$	
Axial force	[N]			$F_{ax} \leq F_{rad,max} \times 0.5$	

$d_w$  = effective diameter [mm] transmission element  
 $f_w$  = additional load factor

- For permissible radial and axial forces and additional load factor see the "Technical data" chapter

#### 5 calculate drive power

		Calculation	
Drive power required	[kW]	$P_1 = \frac{M_{L,max} \times \eta_{L,max}}{9549 \times k_L \times k_H \times k_{Tu} \times \eta_g}$	

$k_L$  = Correction factor - operating mode  
 $k_H$  = correction factor - installation height  
 $k_{Tu}$  = correction factor - ambient temperature

### Procedure of a configuration process - mains operation

#### 6 calculate intensity and determine duty class

Load class	Load type	Intensity
I	Smooth operation, small or light jolts	$F_I \leq 1.25$
II	Uneven operation, average jolts	$1.25 < F_I \leq 4$
III	Uneven operation, severe jolts and/or alternating load	$F_I > 4$

#### 31 - Duty classes

	Calculation	
Intensity	$F_I = \frac{\frac{J_L + J_M + J_B + J_Z}{i^2}}{J_M + J_B + J_Z}$	

$i$  = gearbox ratio

$J_L$  = moment of inertia of the load

$J_M$  = moment of inertia of the motor

$J_B$  = moment of inertia of the brake

$J_Z$  = additional moment of inertia (handwheel, 2nd shaft end ...)

#### 7 determine application factor $k$ from diagram

#### 34 - Load capacity and application factor

# g500-B bevel geared motors

## Project planning

### Procedure of a configuration process - mains operation

8 determine geared motor based on the data determined from the selection tables

Selection table		Check
Drive power $P_N$	[kW]	$P_1 \leq P_N$
Output speed $n_2$	[r/min]	$n_{L,max} \approx n_2$
Output torque $M_2$	[Nm]	$M_{L,max} \leq M_2$
Load factor $c$		$k \leq c$
Order information		Example
Number of stages		2
Ratio $i$		3.267
Product gearbox		g500-H140
Product motor		m550-P80/M4

34 - Load capacity and application factor

#### Example: structure of a selection table

50 Hz:  $P_N = 0.75$  kW ← Rated power  $P_N$

2-stage gearboxes ← Number of the gear stage

Mains operation 400 V, 50 Hz			Inverter operation										i	Product		
$n_2$ [r/min]	$M_2$ [Nm]	c	5 Hz -		- 20 Hz		- 50 Hz (1:10)			- 87 Hz (1:17.4)				g500	m5□□	
			$n_{22}$ [r/min]	$M_{22}$ [Nm]	$n_{21}$ [r/min]	$M_2$ [Nm]	$n_2$ [r/min]	$M_2$ [Nm]	c	$n_2$ [r/min]	$M_2$ [Nm]	c				
444	16	4.3	44	12	184	16	444	16	4.3	784	16	3.5	3.267	-H140	50-P80/M4	
432	16	3.9	43	12	179	16	432	16	3.9	763	16	3.2	3.354	-H100	50-P80/M4	

↑ ↑ ↑  
Output speed  $n_2$     Output torque  $M_2$     Load capacity  $c$

↑ ↑ ↑  
Ratio  $i$     Product Gearbox    Product Motor

### Procedure of a configuration process - inverter operation

#### 5a calculate range of adjustment and determine rated point

		Calculation	
Setting range		$V = \frac{n_{L,max}}{n_{L,min}}$	
Setting range	Motor with integral fan	$\leq 2.5$ (20 ... 50 Hz)	$\leq 4.35$ (20 ... 87 Hz)
	Motor with blower	$\leq 10$ (5 ... 50 Hz)	$\leq 17.4$ (5 ... 87 Hz)
Rated point at		50 Hz	87 Hz

#### 6 calculate intensity and determine duty class

		Calculation	
Intensity	$M_I = \frac{M_{L,max}}{M_{L,min}}$	For alternating load, select load class III!	
Load class	Load type	Intensity	
I	Smooth operation, small or light jolts	$M_I \leq 1.5$	
II	Uneven operation, average jolts	$1.5 < M_I \leq 2$	
III	Uneven operation, severe jolts and/or alternating load	$2 < M_I \leq 2.5$	

31 - Duty classes

#### 7 determine application factor k from diagram

34 - Load capacity and application factor

# g500-B bevel geared motors

## Project planning

### Procedure of a configuration process - inverter operation

8 determine geared motor based on the data determined from the selection tables

Selection table			Check	
Drive power $P_N$		[kW]	$P_1 \leq P_N$	
Max. output speed $n_2$		[r/min]	$n_{L,max} \approx n_2$	
Min. output speed $n_{21}$	Self-ventilated	[r/min]	$n_{L,min} \approx n_{21}$	Setting range 2.5 (50 Hz) Setting range $\leq 4.35$ (87 Hz)
Min. output speed $n_{22}$	Forced-ventilated	[r/min]	$n_{L,min} \approx n_{22}$	Setting range $\leq 10$ (50 Hz) Setting range $\leq 17.4$ (87 Hz)
	Self-ventilated (Reduced output torque)	[r/min]	$n_{L,min} \approx n_{22}$	
Output torque $M_2$		[Nm]	$M_{L,max} \leq M_2$	
Load factor $c$			$k \leq c$	
<b>Order information</b>			<b>Example</b>	
Number of stages			2	
Ratio $i$			3.267	
Product gearbox			g500-H140	
Product motor			m550-P80/M4	

34 - Load capacity and application factor

37 - Torque derating at low motor frequencies

### Example: structure of a selection table

50 Hz:  $P_N = 0.75$  kW  
87 Hz:  $P_N = 1.35$  kW ← Rated power  $P_N$

2-stage gearboxes ← Number of the gear stage

Mains operation 400 V, 50 Hz			Inverter operation										i	Product		
$n_2$ [r/min]	$M_2$ [Nm]	c	5 Hz -		- 20 Hz		- 50 Hz (1:10)			- 87 Hz (1:17.4)				g500	m550	
			$n_{22}$ [r/min]	$M_{22}$ [Nm]	$n_{21}$ [r/min]	$M_2$ [Nm]	$n_2$ [r/min]	$M_2$ [Nm]	c	$n_2$ [r/min]	$M_2$ [Nm]	c				
444	16	4.3	44	12	184	16	444	16	4.3	784	16	3.5	3.267	-H140	-P80/M4	
432	16	3.9	43	12	179	16	432	16	3.9	763	16	3.2	3.354	-H100	-P80/M4	

6.5

### Procedure of a configuration process

### Standards

#### Operating modes

Operating modes S1 ... S10 as specified by EN 60034-1 describe the basic stress of an electrical machine.

In continuous operation a motor reaches its permissible temperature limit if it outputs the rated power dimensioned for continuous operation. However, if the motor is only subjected to load for a short time, the power output by the motor may be greater without the motor reaching its permissible temperature limit. This behaviour is referred to as overload capacity.

Depending on the duration of the load and the resulting temperature rise, the required motor can be selected reduced by the overload capacity.

#### The most important operating modes

Continuous operation S1	Short-time operation S2
<p>Operation with a constant load until the motor reaches the thermal steady state. The motor may be actuated continuously with its rated power.</p>	<p>Operation with constant load; however, the motor does not reach the thermal steady state. During the following standstill, the motor winding cools down to the ambient temperature again. The increase in power depends on the load duration.</p>
Intermittent operation S3	Non-intermittent periodic operation S6
-	-

# g500-B bevel geared motors

## Project planning

### Standards

#### Duty classes

Depending on the load type, the duty classes or impacts are divided as follows:

Duty class	Load type
I	Smooth operation, small or light jolts
II	Uneven operation, average jolts
III	Uneven operation, severe jolts and/or alternating load

In order to support you in classifying your driven machine regarding the right duty class, the following shows sample applications with the corresponding duty class. Depending on, for instance, the operating frequency, driven machines can also have a higher impact. In case of uncertainties, please contact your Lenze sales office.

Drive	Duty class
Construction machines	II
Chemical industry	II
Conveyors	II
Fans	II
Plastics industry	II
Wood working	III
Hoists	III
Metal working	III
Food	II
Paper industry	III
Stones	III
Textile industry	II

### Standards

#### Degrees of protection

The degree of protection indicates the suitability of a motor for specific ambient conditions with regard to humidity as well as the protection against contact and the ingress of foreign particles. The degrees of protection are classified by EN 60529.

The first code number after the code letters IP indicates the protection against the ingress of foreign particles and dust.  
The second code number refers to the protection against the ingress of humidity.

Code number	Degree of protection	Code number	Degree of protection
0	No protection	0	No protection
1	Protection against the ingress of foreign particles $d > 50$ mm. No protection in the case of deliberate access	1	Protection against vertically dripping water (dripping water).
2	Protection against medium-sized foreign particles, $d > 12$ mm, keeping away fingers or similar	2	Protection against diagonally falling water (dripping water), $15^\circ$ compared to normal service position.
3	Protection against small foreign particles $d > 2.5$ mm. Keeping away tools, wires and the like	3	Protection against spraying water, up to $60^\circ$ to the vertical
4	Protection against granular foreign particles, $d > 1$ mm, keeping away tools, wires and the like	4	Protection against spraying water from all directions.
5	Protection against dust deposits (dust-protected), complete protection against contact.	5	Protection against water jets from all directions.
6	Protection against the ingress of dust (dust-proof), complete protection against contact.	6	Protection against choppy seas or heavy water jets (flood protection).

# g500-B bevel geared motors

## Project planning

### Thermal power limit

The thermal power limit, defined by the heat balance, limits the permissible permanent gearbox power.

It is affected by:

- the churning losses in the lubricant. These are determined by the mounting position and the circumferential speed of the gears;
- the load and the speed;
- the ambient conditions: temperature, air circulation, input or dissipation of heat via shafts and the foundations.

We ask you to make a thermal check with the Drive Solution Designer (DSD) or contact the Lenze office responsible for you

- if the input speed  $n_1 > 1500$  r/min is exceeded in case of the gearbox ratios given in the following (can be e.g. recognised by the empty cells in the selection tables):

g500 thermal power limit	
Product	Ratio i
g500-H850 ... H3000	≤ 10
g500-S2100 ... S4500	≤ 16
g500-B1500 ... B4300	≤ 25

g500 thermal power limit	
Product	Ratio i
g500-H5000 ... H14000	≤ 25
g500-S8000 ... S19000	≤ 40
g500-B8000 ... B20000	≤ 60

- If the drive speeds mentioned in the following will be exceeded as a function of the mounting position:

g500 thermal power limit			
Product	Mounting position A	Mounting position A, B, E, F	Mounting position C, D

m550-P112 ... P132	3000 r/min	2600 r/min	1500 r/min
m550-P160 ... P180	2000 r/min	1800 r/min	1500 r/min
m540-P90 ... P250	1500 r/min	1500 r/min	1500 r/min

- ▶ For a short period of time up to 5 min, 30 % higher speeds are permissible

### Possible ways of extending the application area

- Synthetic lubricant (option)
- Shaft sealing rings made from FKM material/Viton (option)
- Reduction in lubricant quantity (after consultation with Lenze)
- Cooling of the geared motor by means of air convection on the machine/system

### Load capacity and application factor

#### Load capacity $c$ of gearboxes

Rated value for the load capacity of Lenze geared motors.

- $c$  is the ratio of the permissible rated torque of the gearbox to the rated torque supplied by the drive component (e.g. the built-in Lenze motor).
- The value of  $c$  must always be greater than the value of the application factor  $k$  calculated for the application.

Required:  $c \geq k$

#### Application factor $k$ (according to DIN 3990)

Takes into account the influence of temporally variable loads which are actually present during the anticipated operating time of gearboxes and geared motors.

$k$  is determined by:

- the type of load
- the load intensity
- temporal influences

- ▶  $S_h$  = switchings/h
- ▶ — Three-phase AC motors MD□MA
- ▶ - - - Three-phase AC motors m240/m540/m550

### Operational performance of three-phase AC geared motors

The g500 geared motors can be actuated directly on the mains or via an inverter. When actuated in mains operation, the motor runs at a fixed speed, for inverter operation the speed is variable. Thanks to their high degree of protection, the robust three-phase drives can be basically used in a variety of applications.

#### Mains operation

During mains operation, when switched on, the three-phase AC motor starts up according to the speed-torque characteristic. It passes through this characteristic until it reaches its stable operating point. This operating point has been reached if the load torque or rated torque ( $M_{\text{rated}}$ ) is lower than the starting torque ( $M_A$ ) and pull-up torque ( $M_S$ ). The rated speed ( $n_{\text{rated}}$ ) of the drive is always lower than the calculated synchronous speed ( $n_S$ ). The difference between rated speed and synchronous speed relating to the synchronous speed is referred to as the "slip".

### Operational performance of three-phase AC geared motors

#### Operation on the inverter

An inverter enables energy-efficient operation of a system in virtually all application cases. The various operating modes, which can be created by making just a few simple settings, facilitate this. The following characteristics and corresponding specifications listed on the following pages can be used to calculate the optimum operating mode during the project planning phase.

#### Standard setting

In its initial state when delivered, the inverter is set up for basic operation with a three-phase AC motor with vector control. When operated in this mode, the rated torque of the motor is available in a setting range up to 50 Hz.

#### Extended setting range up to 87 Hz

If the V/f reference point on the inverter is set to 87 Hz, the rated torque can be used across an extended setting range. Here, a 230/400V motor is for example used and operated in a delta layout with a 400V inverter. The setting range is then increased by 40 %. The inverter must be dimensioned for a rated motor current of 230 V.

## Operational performance of three-phase AC geared motors

### Torque derating at low motor frequencies

The diagram shows the motor frame size-dependent torque reduction for self-ventilated motors, taking the thermal behaviour during actuation of the inverter into consideration.

A = Operation with integral fan and brake  
 B = Operation with integral fan and brake control "Holding current reduction"

C = operation with blower

## Project planning

### Technical data at a glance

The following tables contain the most important data of the gearbox with the motors that can be attached for an approximate dimensioning process of a geared motor. Detailed information can be found in the following chapters.

The data given in the tables apply to

- input speed  $n_1 = 1400$  r/min
- application factor  $c = 1.0$

In order to calculate the exact ratio, the number of teeth  $z_g$  (driven) can be divided by the number of teeth  $z_t$  (driving). These are rounded values.

The data for the max. radial force refer to

- solid shaft without flange
- normal storage
- application factor  $c = 1.3$

For further designs see the "Technical data" chapter.

- The rated torque can be gathered from the last digits of the product name e.g. g500-B45 (45 Nm).

### Gearbox with adapter

The gearboxes with adapter are available for mounting the following motors:

- Three-phase AC motor according to IEC 72/DIN 42948 with FT/FF flange mounting
- Three-phase AC motor according to NEMA with C/TC flange mounting
- Servo motors with FT/FF flange mounting according to IEC 72/DIN 42948

### Adapter for three-phase AC motors

#### Adapter

- For three-phase AC motors according to IEC 72/DIN 42948
- For three-phase AC motors according to NEMA C
- Two-bearing shaft
- Coupling half on the gearbox side integrated in the shaft

#### Spider (ring gear)

- Torsionally rigid
- Conformal
- Low backlash (with clamping hub / backlash-free clamping ring hub)

#### Coupling hub

Standard:

- Coupling hub with keyway for motor shafts according to IEC
- Optional coupling hubs for frequent shocks and load alternations or reduced clutch backlash:
- Clamping hub with tangential terminal screw for motor shafts with featherkey, backlash-free
- Clamping ring hub for motor shafts without slot, backlash-free

  38 - Permissible drive power and output torques.

### Gearbox with adapter

#### Adapter for three-phase AC motors

- The power information and motor sizes refer to 4-pole IEC standard motors.

# g500-B bevel geared motors

## Project planning

### Surface and corrosion protection

For optimum protection of geared motors against ambient conditions, the surface and corrosion protection system (OKS) offers tailor-made solutions.

Various surface coatings combined with other protective measures ensure that the geared motors operate reliably even at high air humidity, in outdoor installations or in the presence of atmospheric impurities. Any colour from the RAL Classic collection can be chosen for the top coat. The geared motors are also available unpainted (no surface and corrosion protection).

Surface and corrosion protection	Applications	Product				
		g500-H45 ... H450 g500-S130 ... S660 g500-B45 ... B450	g500-H600 ... H3000 g500-S950 ... S4500 g500-B600 ... B4300	g500-H5000 ... H14000 g500-S8000 ... S19000 g500-B8000 ... B20000		
Without OKS(uncoated) <sup>1)</sup>	<ul style="list-style-type: none"> <li>Indoor installation, no special corrosion protection necessary</li> <li>Paint provided by the customer</li> </ul>	Standard				
OKS-G (primed)	<ul style="list-style-type: none"> <li>Dependent on subsequent top coat applied</li> </ul>	Optional	Optional	Optional		
OKS-S (small)	<ul style="list-style-type: none"> <li>Standard applications</li> <li>Internal installation in heated buildings</li> <li>Air humidity up to 90%</li> </ul>		Standard	Standard		
OKS-M (medium)	<ul style="list-style-type: none"> <li>Internal installation in non-heated buildings</li> <li>Covered, protected external installation</li> <li>Air humidity up to 95%</li> </ul>		Optional		Optional	
OKS-L (large)	<ul style="list-style-type: none"> <li>External installation</li> <li>Air humidity above 95%</li> <li>Chemical industry plants</li> <li>Food industry</li> </ul>			Optional

# g500-B bevel geared motors

## Project planning

### Lubricants

Lenze gearboxes and geared motors are ready for operation on delivery and are filled with lubricants specific to both the drive and the design. The mounting position and design specified in the order are key factors in choosing the volume of lubricant.

The amount and type of lubricant contained in the gearbox are given on the nameplate.

The following gearboxes are lubricated for life:

- bevel gearboxes g500-B45 ... 240

### Lubricant table

The following lubricants are recommended:

Mode	CLP 220	CLP 460	CLP HC 220
Ambient temperature [°C]	0 ... +40		-25 ... +50
Specification	Mineral oil with EP additives		Synthetic oil (polyalphaolefins basis)
Changing interval	16000 operating hours After 3 years at the latest Oil temperature 70 °C		25000 operating hours After 4 years at the latest Oil temperature 70 °C
Fuchs	Renolin CLP 220 CLP Plus 220	Renolin CLP 460 CLP Plus 460	Renolin Unisyn CLP 220 XT220
Klüber	Klüberoil GEM 1-220 N	Klüberoil GEM 1-460 N	Klübersynth GEM 4-220 N
Shell	Shell Omala S2 G 220 S2 GX 220	Shell Omala S2 G 460 S2 GX 460	Shell Omala S4 GX HD 220

Mode	CLP HC 320	CLP HC 220 USDA H1	CLP PG 460 USDA H1
Ambient temperature [°C]	-25 ... +50	-20 ... +40	
Specification	Synthetic oil (polyalphaolefins basis)		Synthetic oil (polyglycol basis)
Changing interval	25000 operating hours After 4 years at the latest Oil temperature 70 °C	16000 operating hours After 3 years at the latest Oil temperature 70 °C	
Fuchs	Renolin Unisyn CLP 320 XT 320	Cassida Fluid GL 220	Cassida Fluid WG 460
Klüber	Klübersynth GEM 4-320 N	Klüberoil 4 UH1-220 N	Klüberoil UH1 6-460
Shell	Shell Omala S4 GX HD 320		

- Please contact your Lenze sales office if you are operating at ambient temperatures in areas up to < -20 °C bzw. > or up to +40°C.

### Shaft sealing rings

By default, the gearboxes come with NBR shaft sealing rings at the output end. At high speed and unfavourable ambient conditions such as high temperature, reduced circulation of air etc., Lenze recommends the use of FKM (Viton) shaft sealing rings.

Please consider this in your order.

# g500-B bevel geared motors

## Project planning

---

### Ventilation

#### Non-ventilated gearboxes

No ventilation is required for the gearboxes g500-B45 ... B240.

#### Ventilated gearboxes

The gearbox g500-B240 can be optionally ordered with breather elements.

From g500-B450 onwards, the gearboxes are supplied with a breather element as standard.

#### Gearbox in combined mounting position

For reducing the number of versions, the gearboxes can also be ordered in a combined mounting position:

- g500-B45 in mounting position ABCDEF
- g500-B110 ... B450 in mounting position AEF

In these gearboxes, the lubricant amount has been optimised for the use in different mounting positions. If required, the breather elements are loosely enclosed and have to be mounted before commissioning depending on the mounting position.

A gearbox can be used for several mounting positions.

<sup>2)</sup> In case of cURus max. 40 °C are permissible.

<sup>3)</sup> m550 on request.

- In the European Union, the ErP Directive stipulates minimum efficiency levels for three-phase AC motors. Geared three-phase AC motors that do not conform with this Directive do not meet CE requirements and must not be marketed in the European Economic Area. For further information about the ErP Directive, the efficiency regulations in other countries and the Lenze products concerned, please refer to the brochure "International efficiency directives for three-phase AC motors".

### Permissible radial and axial forces at output

#### Permissible radial force

$$F_{rad,perm} = f_w \times F_{rad,max}$$

► If  $F_{rad}$  and  $F_{ax} \neq 0$ , please contact Lenze.

#### Permissible axial force

If there is no radial force, the maximum permissible axial force is 50 % of the table value  $F_{rad,max}$

— Solid shaft  
 - - - Hollow shaft

# g500-B bevel geared motors

## Technical data

### Permissible radial and axial forces at output

The values given in the table refer to the center shaft end force application point and are minimum values calculated according to the most unfavourable conditions (force application angle, mounting position, direction of rotation). The values were calculated for the motor/gear-box combination with a load capacity of  $c= 1.3$  and an input speed of 1400 r/min.

In case of different operating conditions, considerably higher forces can be transmitted. Please contact Lenze.

- A hollow shaft with shrink disc requires a check by Lenze.

## Technical data

### Selection tables, notes

#### Notes on the selection tables with 4-pole motors

The selection tables show the available combinations of gearbox type, number of stages, ratio and motor. They are used only to provide basic orientation.

The following legend indicates the structure of the selection tables.

**Rated power  $P_{rated}$  of the drive motor depending on the rated frequency**

50 Hz:  $P_N = 0.75$  kW  
87 Hz:  $P_N = 1.35$  kW

**2-stufige Getriebe** ← **Number of the gear stage of the gearbox**

**Torque diagram**

Mains operation 400 V, 50 Hz			Inverter operation										i	Product		
$n_2$ [r/min]	$M_2$ [Nm]	c	5 Hz -		- 20 Hz		- 50 Hz (1:10)			- 87 Hz (1:17.4)				g500	m5□□	
$n_{22}$ [r/min]	$M_{22}$ [Nm]		$n_{22}$ [r/min]	$M_{22}$ [Nm]	$n_{21}$ [r/min]	$M_2$ [Nm]	$n_2$ [r/min]	$M_2$ [Nm]	c	$n_2$ [r/min]	$M_2$ [Nm]	c				
407	17	4.9	41	13	168	17	407	17	4.9	718	17	4.0	3.565	-B240	50-P80/M4	
280	24	2.8	28	19	116	24	280	24	2.8	494	25	2.3	5.185	-B110	50-P80/M4	

**Load capacity c of the gearbox**  
c is the ratio between the permissible rated torque of the gearbox and the rated torque of the three-phase AC motor (converted to the driven shaft).  
c must be always higher than the service factor k determined for the application k.

$$c = \frac{M_{2,zul}}{M_{1N} \cdot i \cdot \eta_{Getr}} > k$$

**Mains operation**  
Output speed  $n_2$   
Output torque  $M_2$

**Inverter operation**  
The speed and torque data are valid for self-ventilated and forced ventilated drives. Forced ventilated drives can always output the torque  $M_2$  in the entire setting ranges. In the case of self-ventilated drives, a reduction to  $M_{22}$  is required in the lower speed range.

**Ratio i**

**Product Gearbox**

**Product Motor**

**Page number for dimensions**

#### Motor voltages

The power values and torques indicated in the selection tables refer to the following motor voltages:

- 50 Hz :  $\Delta$  230 V / Y 400 V
- 87 Hz : 400 V

#### Operation at 87 Hz

In 87 Hz operation, the three-phase AC motor (which is designed for a voltage of  $\Delta$  230 V / Y 400 V at 50 Hz) is operated on an inverter with 400 V rated voltage in a delta connection. It is important to note here that the inverter must be configured for 87Hz output.

This offers the following advantages over 50 Hz operation:

- the setting range of the motor is increased by a factor of 1.73.
- the motor can then provide around 1.73 times greater output, which in turn allows a smaller and more affordable motor to be selected for the application.
- the efficiency of the motor is also improved.

## Overview

### Torque plate

The torque is usually supported via the foot or the flange. Another simple option are the attachable torque plates. Here, the torque is supported only via one point and is, among other things, suitable for shaft-mounted gearboxes. The supplied rubber buffers provide for a low-tension installation and absorb slight shocks. The torque plates are available in two versions, for being installed at the existing threaded pitch circle or for the foot at the gearbox.

In addition, torque support for the g500-B45 gearbox can be effected via the holding fixture of the housing, which is integrated on both sides, by means of a rubber buffer. The rubber buffers can be ordered optionally.

## Overview

### Shaft cover

The hoseproof hollow shaft cover protects the hollow shaft from objects falling in. It is sealed by a flat gasket between cover and housing. Thus, the hollow shaft is protected from dust and water jets.

The cover is loosely enclosed and can be mounted on both sides of the hollow shaft bore.

The optional shrink disc cover is provided for the shrink disc to be protected from contact.

### Motor connection

The three-phase AC motors are designed for operation at a constant mains frequency and with an inverter.

For 50 Hz operation, the motors are operated in  $\Delta$  configuration at 230 V or in star configuration at 400 V.

For inverter operation, the base frequency has been specified as 87 Hz at a rated voltage of 400 V in  $\Delta$  configuration.

The standard connection is implemented via a terminal box. Furthermore ICN and HAN connectors are provided to quickly carry out commissioning or maintenance operations.

## Product extensions

### Connections via ICN connectors

A connector is used for the power connection, connection of the brake, and the temperature monitoring connection. The feedback and blower connections are implemented via a separate connector in each case.

#### Connection for power, brake and temperature monitoring

For the power connection of the connector, a max. rated motor current of 16 A is permissible. The connectors can be rotated by 270° and are equipped with a bayonet catch for SpeedTec connectors. As the connector fixing is also compatible with conventional box nuts, existing mating connectors can still be used without difficulty. The motor connection is determined in the terminal box.

#### ICN M23 6-pole

- No temperature monitoring connection possible!  
If a feedback is used, the PT1000/KTY thermal detector connection can be realised in the separate connection of the feedback (ICN M23 connector).

## Connections via ICN connectors

### Blower connection

The blower is also optionally available with an ICN connector fixed to the terminal box of the blower for exceptionally fast commissioning. The connectors are fitted with a bayonet fixing, which is also compatible with conventional union nuts. Existing counter plugs can therefore continue to be used without difficulty.

For the blower, the terminal box cover including the connector can be rotated by 90 ° step by step, if required.

### Spring-applied brake

The three-phase AC motors can be equipped with a spring-applied brake which is active when the supply voltage has been switched off (closed-circuit principle). In the deenergised state, the brake is applied. This prevents possible movement of the motor shaft with regard to the load after switch-off or in the event of a power failure. For optimum adaptation of the brake motor to the application, several brake sizes and control variants are provided for each motor.

#### Versions

- **Standard**
  - $1 \times 10^6$  repeating switching cycles
  - $1 \times 10^6$  reversing switching cycles
- **LongLife**
  - $10 \times 10^6$  repeating switching cycles
  - $15 \times 10^6$  reversing switching cycles

#### Braking torques

In addition to the standard braking torque, depending on the brake size, the possibility of choosing between a reduced and an increased braking torque is provided.

- When the braking torque is reduced, great wear reserves can be attained. This is enabled by a reduction of the spring rate.
- In order to obtain a greater braking torque, the spring rate is increased. This is practical, for instance, for hoists, since here the gravity acts as an additional acceleration in the negative direction.

#### Manual release

By using the manual release lever, the brake can be released manually in deenergised operating state. The manual release makes positioning and maintenance work easier.

### Spring-applied brake

#### Direct connection without rectifier

If the brake is activated directly without a rectifier, a freewheeling diode or a spark suppressor is required for protection against induction peaks.

- Supply voltages  
DC 24 V

#### Connection via mains voltage with brake rectifier

If the brake is not directly supplied with DC voltage, a rectifier is required. This is included in the scope of supply and is located in the terminal box of the motor. The rectifier converts the AC voltage of the connection into DC voltage. The following rectifiers are available:

##### Rectifier, 6-pole

- Approval UL / CSA
- Supply voltages  
AC 230 V  
AC 400 V  
AC 460 V

##### Bridge/half-wave rectifier, 6-pole

- Supply voltage / brake coil voltage ratio  
up to the overexcitation time = 1.11  
From the overexcitation time = 2.22
- Supply voltages  
AC 230 V  
AC 400 V

During the switching operation the bridge/half-wave rectifier functions as a bridge rectifier for the overexcitation time  $t_{ij}$  and then as a half-wave rectifier. This combination optimises the performance of the brake – depending on the assignment of brake coil voltage and supply voltage:

##### • Short-time overexcitation of the brake coil

Activating the brake coil for the overexcitation time  $t_{ij}$  with twice the rated voltage allows the disengagement time to be reduced. The brake opens more quickly and wear on the friction lining is reduced.

These features make this activation version particularly suitable for lifting applications. It is therefore only available in combination with a brake with increased braking torque.

##### • Holding current reduction (cold brake)

By reducing the holding current, the bridge/half-wave rectifier is able to reduce the power input to the open brake. As the brake heats up less, this type of activation is known as "cold brake".

MD□MA□□071-32 MD□MA□□071-42	06 08	185 186	29 27	107 136	13.0 13.0

The following combinations with manual release lever and motor connection in the same position are not possible:

- HAN connector with connection in position 1
- Inverter motec
- Terminal box of motor size 071 for brake and retracting (M□□MA BR/BS/BA/BI)

### Feedback

Depending on the application, the following resolvers, incremental encoders or absolute value encoders are provided for speed and position detection.

#### Resolver

The stator-supplied resolver with two stator windings shifted by 90° and a rotor winding with transformer winding can detect both the speed and the rotor position. The rotor position is retained in the event of a voltage failure.

- ▶ The three-phase AC motors with resolver cannot be used for speed-dependent safety functions in connection with the SM 301 safety module.

## Feedback

### Incremental encoder and SinCos absolute value encoder

Incremental encoders can only be used for speed measurement, but not for speed control. Homing is required in order to enable positioning later.

Absolute value encoders can detect the speed, the rotor position, and the machine position with a very high resolution. They are used for the positioning of dynamic applications and do not require homing.

- The three-phase AC motors with incremental encoders or SinCos absolute value encoders cannot be used for speed-dependent safety functions in connection with the SM 301 safety module.

# Motor data MD

## Product extensions

### Blower

During operation with the rated torque at low speeds (< 20 Hz), the integral fan does not rotate fast enough anymore to ensure sufficient cooling of the motor. In order to prevent overheating, operation without a blower requires a torque reduction of the motor. The blower cools the motor steadily and irrespective of the motor speed. A torque reduction is not required and the motor can be actuated with its rated torque from 5 Hz to the rated frequency.

### Temperature monitoring

To protect the motor against overheating, the following thermal sensors are provided.

The thermal sensors are integrated into the windings. We recommend using an additional motor protection switch.

#### TKO thermal contacts

The TCO thermal contact (thermal NC contact) is a bimetallic-element switch. The TCO monitors the motor winding temperature; at too high temperatures, the motor relay switches. The motor is disconnected from the mains.

Function	Operating temperature	Min. reset temperature	Max. reset temperature	Max. input current	Max. input voltage
					AC
	T	$T_{min}$	$T_{max}$	$I_{in,max}$	$U_{in,max}$
	-5 ... 5				
	[°C]	[°C]	[°C]	[A]	[V]
NC contact	150	90.0	135	2.50	250

#### PTC thermistor

The PTC thermistor is actuated in connection with a tripping unit. If the motor gets too hot, the motor can be switched off by means of a contactor. In contrast to the thermal contact, quick restart is possible.

Function	Operating temperature	Rated resistance			Standard
		155 °C	-20 °C	140 °C	
	T	$R_N$	$R_N$	$R_N$	
	-5 ... 5				
	[°C]	[Ω]	[Ω]	[Ω]	
Sudden change in resistance	150	550	30.0	250	DIN 44080 DIN VDE 0660 Part 303

## Temperature monitoring

### Thermal detectors PT1000

The thermal detectors work as continuously variable resistors, showing a similar tendency as PTC thermistors. However, with an increasing temperature, the resistance only increases comparatively slowly, enabling the controller to determine the temperature at regular intervals and to already perform a process evaluation at an early stage. In this way, the motor can already be switched off before it is overheated.

- If the thermal sensor is supplied with a measurement current of 1 mA, the relationship shown in the diagram between the temperature and the resistance measured applies.

### Motor connection

The three-phase AC motors are designed for operation at a constant mains frequency and with an inverter.

For 50 Hz operation, the motors are operated in  $\Delta$  configuration at 230 V or in star configuration at 400 V.

For inverter operation, the base frequency has been specified as 87 Hz at a rated voltage of 400 V in  $\Delta$  configuration.

The standard connection is implemented via a terminal box. Furthermore ICN and HAN connectors are provided to quickly carry out commissioning or maintenance operations.

### Overview of the connection options

### Connections via ICN connectors

A connector is used for the power connection, connection of the brake, and the temperature monitoring connection. The feedback and blower connections are implemented via a separate connector in each case.

#### Connection for power, brake and temperature monitoring

For the power connection of the connector, a max. rated motor current of 16 A is permissible. The connectors can be rotated by 270° and are equipped with a bayonet catch for SpeedTec connectors. As the connector fixing is also compatible with conventional box nuts, existing mating connectors can still be used without difficulty. The motor connection is determined in the terminal box.

#### ICN M23 6-pole

- No temperature monitoring connection possible!  
If a feedback is used, the PT1000/KTY thermal detector connection can be realised in the separate connection of the feedback (ICN M23 connector).

### Spring-applied brake

The three-phase AC motors can be equipped with a spring-applied brake which is active when the supply voltage has been switched off (closed-circuit principle). In the deenergised state, the brake is applied. This prevents possible movement of the motor shaft with regard to the load after switch-off or in the event of a power failure. For optimum adaptation of the brake motor to the application, several brake sizes and control variants are provided for each motor.

#### Versions

- **Standard**
  - $1 \times 10^6$  repeating switching cycles
  - $1 \times 10^6$  reversing switching cycles
- **LongLife**
  - $10 \times 10^6$  repeating switching cycles
  - $15 \times 10^6$  reversing switching cycles

#### Braking torques

In addition to the standard braking torque, depending on the brake size, the possibility of choosing between a reduced and an increased braking torque is provided.

- When the braking torque is reduced, great wear reserves can be attained. This is enabled by a reduction of the spring rate.
- In order to obtain a greater braking torque, the spring rate is increased. This is practical, for instance, for hoists, since here the gravity acts as an additional acceleration in the negative direction.

#### Manual release

By using the manual release lever, the brake can be released manually in deenergised operating state. The manual release makes positioning and maintenance work easier.

### Spring-applied brake

#### Direct connection without rectifier

If the brake is activated directly without a rectifier, a freewheeling diode or a spark suppressor is required for protection against induction peaks.

- Supply voltages  
DC 24 V

#### Connection via mains voltage with brake rectifier

If the brake is not directly supplied with DC voltage, a rectifier is required. This is included in the scope of supply and is located in the terminal box of the motor. The rectifier converts the AC voltage of the connection into DC voltage. The following rectifiers are available:

##### Rectifier, 6-pole

- Approval UL / CSA
- Supply voltages  
AC 230 V  
AC 400 V  
AC 460 V

##### Bridge/half-wave rectifier, 6-pole

- Supply voltage / brake coil voltage ratio  
up to the overexcitation time = 1.11  
From the overexcitation time = 2.22
- Supply voltages  
AC 230 V  
AC 400 V

During the switching operation the bridge/half-wave rectifier functions as a bridge rectifier for the overexcitation time  $t_{ij}$  and then as a half-wave rectifier. This combination optimises the performance of the brake – depending on the assignment of brake coil voltage and supply voltage:

##### • Short-time overexcitation of the brake coil

Activating the brake coil for the overexcitation time  $t_{ij}$  with twice the rated voltage allows the disengagement time to be reduced. The brake opens more quickly and wear on the friction lining is reduced.

These features make this activation version particularly suitable for lifting applications. It is therefore only available in combination with a brake with increased braking torque.

##### • Holding current reduction (cold brake)

By reducing the holding current, the bridge/half-wave rectifier is able to reduce the power input to the open brake. As the brake heats up less, this type of activation is known as "cold brake".

- The brake response and application times are guide values. The engagement time is 10 times longer with AC-side switching. With the maximum air gap the disengagement time  $t_2$  – depending on the brake and control – is up to 4 times longer than the disengagement time with the rated air gap.

### Spring-applied brake

#### Manual release

By using the manual release lever, the brake can be released manually in deenergised operating state. The manual release makes positioning and maintenance work easier.

## Product extensions

### Feedback

Depending on the application, the following resolvers, incremental encoders or absolute value encoders are provided for speed and position detection.

#### Resolver

The stator-supplied resolver with two stator windings shifted by 90° and a rotor winding with transformer winding can detect both the speed and the rotor position. The rotor position is retained in the event of a voltage failure.

- The three-phase AC motors with resolver cannot be used for speed-dependent safety functions in connection with the SM 301 safety module.

## Feedback

### Incremental encoder and SinCos absolute value encoder

Incremental encoders can only be used for speed measurement, but not for speed control. Homing is required in order to enable positioning later.

Absolute value encoders can detect the speed, the rotor position, and the machine position with a very high resolution. They are used for the positioning of dynamic applications and do not require homing.

- The three-phase AC motors with incremental encoders or SinCos absolute value encoders cannot be used for speed-dependent safety functions in connection with the SM 301 safety module.

## Product extensions

### Blower

During operation with the rated torque at low speeds (< 20 Hz), the integral fan does not rotate fast enough anymore to ensure sufficient cooling of the motor. In order to prevent overheating, operation without a blower requires a torque reduction of the motor. The blower cools the motor steadily and irrespective of the motor speed. A torque reduction is not required and the motor can be actuated with its rated torque from 5 Hz to the rated frequency.

### Temperature monitoring

To protect the motor against overheating, the following thermal sensors are provided.

The thermal sensors are integrated into the windings. We recommend using an additional motor protection switch.

#### TKO thermal contacts

The TCO thermal contact (thermal NC contact) is a bimetallic-element switch. The TCO monitors the motor winding temperature; at too high temperatures, the motor relay switches. The motor is disconnected from the mains.

Function	Operating temperature	Min. reset temperature	Max. reset temperature	Max. input current	Max. input voltage
					AC
	T	$T_{\min}$	$T_{\max}$	$I_{\text{in,max}}$	$U_{\text{in,max}}$
	-5 ... 5				
	[°C]	[°C]	[°C]	[A]	[V]
NC contact	150	90.0	135	2.50	250

#### PTC thermistor

The PTC thermistor is actuated in connection with a tripping unit. If the motor gets too hot, the motor can be switched off by means of a contactor. In contrast to the thermal contact, quick restart is possible.

Function	Operating temperature	Rated resistance			Standard
		155 °C	-20 °C	140 °C	
	T	$R_N$	$R_N$	$R_N$	
	-5 ... 5				
	[°C]	[Ω]	[Ω]	[Ω]	
Sudden change in resistance	150	550	30.0	250	DIN 44080 DIN VDE 0660 Part 303

## Temperature monitoring

### KTY temperature sensor

The thermal detectors work as continuously variable resistors, showing a similar tendency as PTC thermistors. However, with an increasing temperature, the resistance only increases comparatively slowly, enabling the controller to determine the temperature at regular intervals and to already perform a process evaluation at an early stage. In this way, the motor can already be switched off before it is overheated.

	Function	Rated resistance			Max. input current	
		25 °C	150 °C	170 °C	25 °C	170 °C
		R <sub>N</sub>	R <sub>N</sub>	R <sub>N</sub>	I <sub>in,max</sub>	I <sub>in,max</sub>
		[Ω]	[Ω]	[Ω]	[A]	[A]
KTY83-110	Continuous resistance change	1000	2225	2471	0.010	0.002
KTY84-130	Continuous resistance change	603	1334	1482	0.010	0.002

- If the thermal sensor is supplied with a measurement current of 1 mA, the relationship shown in the diagram between the temperature and the resistance measured applies.

## Product extensions

### Motor connection

The three-phase AC motors are designed for operation at a constant mains frequency and with an inverter.

For 50 Hz operation, the motors are operated in  $\Delta$  configuration at 230 V or in star configuration at 400 V.

For inverter operation, the base frequency has been specified as 87 Hz at a rated voltage of 400 V in  $\Delta$  configuration.

The standard connection is implemented via a terminal box. Furthermore HAN connectors are provided to quickly carry out commissioning or maintenance operations.

### Spring-applied brake

The three-phase AC motors can be equipped with a spring-applied brake which is active when the supply voltage has been switched off (closed-circuit principle). In the deenergised state, the brake is applied. This prevents possible movement of the motor shaft with regard to the load after switch-off or in the event of a power failure. For optimum adaptation of the brake motor to the application, several brake sizes and control variants are provided for each motor.

#### Types

- **Standard**
  - $1 \times 10^6$  repeating switching cycles
  - $1 \times 10^6$  reversing switching cycles

#### Braking torques

In addition to the standard braking torque, depending on the brake size, the possibility of choosing between a reduced and an increased braking torque is provided.

- When the braking torque is reduced, great wear reserves can be attained. This is enabled by a reduction of the spring rate.
- In order to obtain a greater braking torque, the spring rate is increased. This is practical, for instance, for hoists, since here the gravity acts as an additional acceleration in the negative direction.

#### Manual release

By using the manual release lever, the brake can be released manually in deenergised operating state. The manual release makes positioning and maintenance work easier.

# Motor data m540

## Product extensions

---

### Spring-applied brake

#### Direct connection without rectifier

If the brake is activated directly without a rectifier, a freewheeling diode or a spark suppressor is required for protection against induction peaks.

- Supply voltages  
DC 24 V

#### Connection via mains voltage with brake rectifier

If the brake is not directly supplied with DC voltage, a rectifier is required. This is included in the scope of supply and is located in the terminal box of the motor. The rectifier converts the AC voltage of the connection into DC voltage. The following rectifiers are available:

##### Rectifier, 6-pole

- Approval UL / CSA
- Supply voltages  
AC 230 V  
AC 400 V  
AC 460 V

## Spring-applied brake

$Q$  = Switching energy per switching cycle

$S_h$  = Operating frequency

Brake size = 06 to 25

## Spring-applied brake

### Manual release

By using the manual release lever, the brake can be released manually in deenergised operating state. The manual release makes positioning and maintenance work easier.

The following combinations with manual release lever and motor connection in the same position are not possible:

- HAN connector with connection in position 1

### Feedback

#### Incremental encoder and SinCos absolute value encoder

Incremental encoders can only be used for speed measurement, but not for speed control. Homing is required in order to enable positioning later.

Absolute value encoders can detect the speed, the rotor position, and the machine position with a very high resolution. They are used for the positioning of dynamic applications and do not require homing.

- The three-phase AC motors with incremental encoders or SinCos absolute value encoders cannot be used for speed-dependent safety functions in connection with the SM 301 safety module.

Encoder type			HTL incremental		
Product key			IG512-24V-H <sup>1)</sup>	IG1024-24V-H	IG2048-24V-H <sup>1)</sup>
Pulses			512	1024	2048

# Motor data m540

## Product extensions

### Blower

During operation with the rated torque at low speeds (< 20 Hz), the integral fan does not rotate fast enough anymore to ensure sufficient cooling of the motor. In order to prevent overheating, operation without a blower requires a torque reduction of the motor. The blower cools the motor steadily and irrespective of the motor speed. A torque reduction is not required and the motor can be actuated with its rated torque from 5 Hz to the rated frequency.

## Temperature monitoring

### PTC thermistor

The PTC thermistor is actuated in connection with a tripping unit. If the motor gets too hot, the motor can be switched off by means of a contactor. In contrast to the thermal contact, quick restart is possible.

#### m540-P90

Function	Operating temperature	Rated resistance			Standard
		155 °C	-20 °C	140 °C	
	T	R <sub>N</sub>	R <sub>N</sub>	R <sub>N</sub>	
	-5 ... 5				
	[°C]	[Ω]	[Ω]	[Ω]	
Sudden change in resistance	155	1330	100	550	

#### m540-P100...P250

Function	Operating temperature	Rated resistance			Standard
		155 °C	-20 °C	140 °C
