INDEX

Technical information pag. 04

CONTROL CABLES

According to standards VDE 0250 (as applicable)

TRATOSMART®-(N)SHTÖU-JZ — TRATOSMART®-(N)SHTÖU-JZK — TRATOSGREEN®-(N)SHTÖU-JZ

Reduced dimension cable laid on ground for **reeling one way application** pag. 14

TRATOSFESTOON®

Reduced dimension cable for **festoon application** pag. 16

TRATOSLIGHT-VRDB® — TRATOSLIGHT-VRDB-FO®

Cable for vertical application and **spreader reels** pag. 18

TRATOSCOILFLEX® — TRATOSCOILFLEX-K® — TRATOSCOILFLEX-FO®

Lead free cables for gravity-fed collector in **basket suitable for spreader connection** pag. 20

LOW VOLTAGE POWER CABLES

According to standards VDE 0250 (as applicable)

TRATOSMART-DB®-(N)SHTÖU-J — TRATOSGREEN-DB®-(N)SHTÖU-J

High speed, high pull & torsion resistance. Main application **E-RTG** and **reeling two ways application** pag. 22

TRATOSMART®-(N)SHTÖU-J — TRATOSMART®-(N)SHTÖU-JK — TRATOSGREEN®-(N)SHTÖU-J

Reduced weight and dimension for **reeling one way application** pag. 24

MEDIUM VOLTAGE POWER CABLES

According to standards VDE 0250 p. 813 (as applicable)

TRATOSFLEX-ESDB®

High speed, high pull & torsion resistance pag. 26

TRATOSFLEX-ES3® — TRATOSGREEN-ES3®

Extruded screen. Reduced weight and dimension for **reeling one way application** pag. 28

TRATOSFLEX-ESDB-FO®

High speed, high pull and torsion resistance pag. 30

TRATOSFLEX-ES3-FO® — TRATOSGREEN-ES3-FO®

Extruded screen. Reduced weight and dimension for **reeling one way application** pag. 32

TRATOSFLAT® — TRATOSFLAT-FO®

Flat cable for **reeling application** pag. 34

FIBRE CABLES

Fibre optic cable pag. 36

CUSTOMIZED UPON REQUEST

- 1) Reduced halogens and toxicity, flame retardant (e.g. for tunnels, buildings...) TratosGreen type
- 2) Improved response to chemical attack
- 3) Improved resistance to low temperatures (down to -50°C only for black outer sheath)
- 4) Composed cables (e.g. power and control cores screened or without screen)

Tratos Cavi S.p.A. reserves the right to make at any time and without previous notice, variations on products described in this catalogue. Moreover Tratos Cavi S.p.A. shall not have responsibility for improper use of its electrical cables.

1. Selection of cable type in relation to use

In relation to the type of application the cable designs shall adopt construction characteristics required to give the cable the best performance in relation to its application. Other important factors which are also considered for all the types are:

- Operating temperature
- Tensile stress
- Bending radius
- Operating speed

4. Current carrying capacities for intermittent operation

In case of intermittent operation, for example, period of 10 minutes of full load is followed by a longer period with no load. These 10 minutes taken as percentage of total duration DT of the cycle provide a percentage load factor.

$$\text{Load factor FC \%} = (10m_i / DT) \times 100$$

In this case the current carrying capacity as calculated using table 1, can be increased using factors given in table 4.

185	0,134	0,073	0,074	0,081				0,26
240	0,101	0,072	0,074					0,22

The value is calculated by multiplying the factors K (mV/Am) given in the table by effective current capacity I (A) of the cable then by the length of the connection L (in km):

$$\text{Voltage drop (v)} = I \text{ (A)} \times L \text{ (km)} \times K \text{ (mV/Am)}$$

The factors have been calculated using the formula:

$$K \text{ (mV/Am)} = 1.73 \times (R \cos \varphi + X \sin \varphi)$$

Where:

R = resistance of the conductor (Ohm/km) at operating temperature of 80°C and frequency of 50 Hz

X = Cable reactance (Ohm/km) at 50 Hz

6. Short circuit current

Short circuit current (thermal limit of short circuit) in heavy duty mobile application, must be calculated using the following reference values (VDE 0250 c.8/75)

Initial = 80°C (cable under full load)
Final short circuit temperature = 200°C

The short circuit currents (thermal limit) given in the table below have been calculated using these values and are valid for a base time of 1 sec.

Table 6

Nominal cable cross section mm ²	One second thermal limit for all voltages kA	Dynamic limit for three core cables					
		up to 1kV	3 kV	6 kV	10 kV	15 kV	20 kV
		indicative value (1) kA					
1,5	0,20						
2,5	0,32						
4	0,51						
6	0,77						
10	1,29						
16	2,06	30	40	45	50	55	
25	3,22	35	43	50	55	60	
35	4,50	40	48	53	60	65	75
50	6,43	45	50	58	63	70	80
70	9,00	50	55	63	68	75	83
95	12,20	55	60	70	75	75	
120	15,40	60	65	72	78	80	
150	19,30	65	68	75	80		
185	23,80	70	72	80	84		
240	31,00	80					

For a different initial and final temperature (for example 90°C initial and 250°C final temperature admissible for our cable HEPR insulated). The thermal limits are calculated with:

$$I_{cc(a)} = \frac{K_{cc} \times \text{conductor cross section (mm}^2\text{)}}{\sqrt{t (\text{sec})}}$$

Where the coefficient Kcc assumes the following values:

Final short circuit temperature °C	Initial short circuit temperature of the conductor						
	30 °C	40 °C	50 °C	60 °C	70 °C	80 °C	90 °C
160	143	136	129	122	115	107	100
200	159	153	147	141	135	128	122
250	176	170	165	159	154	148	143

(1) Indicative value because in flexible cables only a very special construction (e.g. pitch conductors, cores assembly...) reduces the electrodynamic forces from separating the grouped cores.

8. General recommendations

Fundamental to avoid:

- Misalignment in order to avoid cable torsion
- Sudden changes of bending radius
- Overtension of the cable
- Change of direction within a distance of less than 20 times cable O.D.
- Use of sheaves not having a flat profile

FEATURES AND PERFORMANCES

CONSTRUCTION

- 1) Conductor more flexible than cl. 5 VDE 0295
- 2) Semiconducting layer + insulation Tratosflex-ES3-I®, equivalent to HEPR + Semiconducting layer*
- 3) Ground conductor with semiconducting layer
- 4) Inner sheath high grade compound Tratosflex-ES3-IS®, better than GM1b quality
- 5) Antitorsional protection
- 6) Outer sheath red colour polychloroprene Tratosflex-ES3-OS®, equivalent to or better than 5GM3 (or 5GM5 if required) quality

** Upon request available special construction with 6 up to 24 integrated optical fibers. Standard fibres type 62,5/125 (also available 50/125 and monomode E9/125)

Cables for rated voltage >= 18/30 kV are produced upon request.

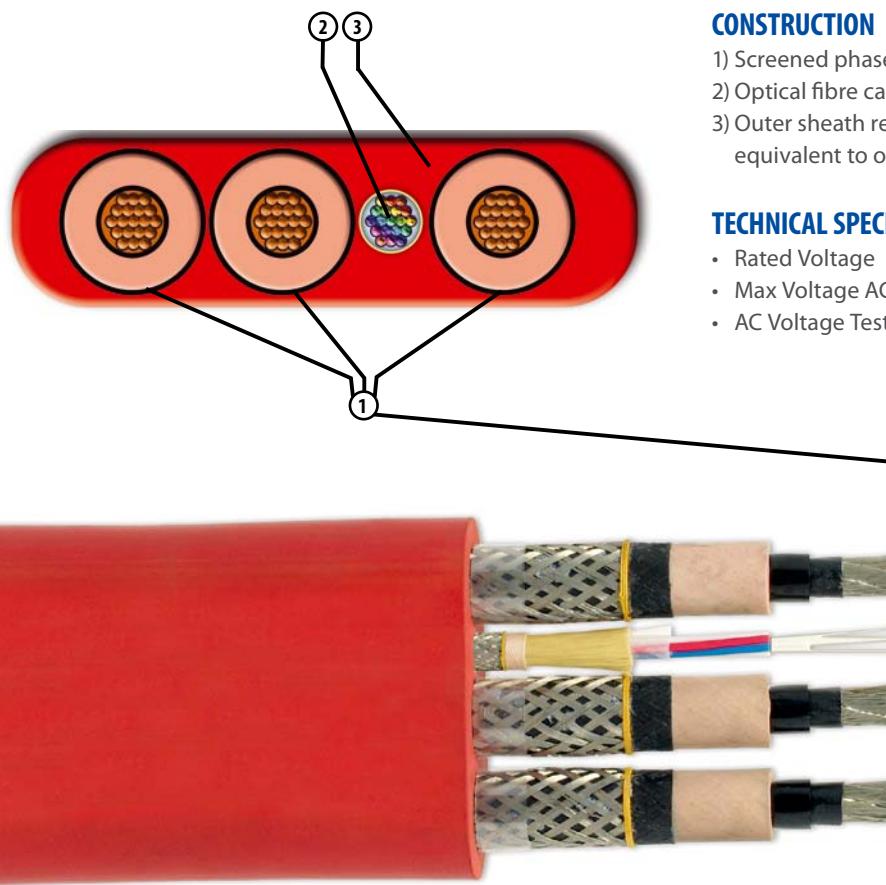

MEDIUM VOLTAGE FLAT CABLE for reeling application

TRATOSFLAT® TRATOSFLAT-FO®

Medium voltage flat cable.

FEATURES AND PERFORMANCES

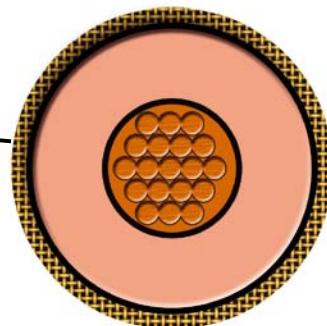

CONSTRUCTION

- 1) Screened phase conductors
- 2) Optical fibre cable
- 3) Outer sheath red colour polychloroprene Tratoflat-OS®, equivalent to or better than 5GM3 (or 5GM5 if required) quality

TECHNICAL SPECIFICATIONS

- Rated Voltage 3,6/6 kV 6/10 kV
- Max Voltage AC 4,2/7,2 kV 6,9/12 kV
- AC Voltage Test 11 kV 17 kV

Working Ambient Temperature:

Fixed installation -40 °C

In operation -25°C to +80 °C

Travel Condition:

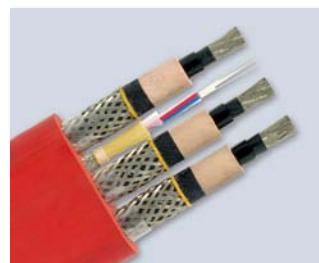

Main application MONOSPIRAL REEL

Suitable m/min Max 180

Resistance to oil		Acc. to DIN VDE 0473

SPECIAL CABLES TAILORED

BESPOKEN CABLES

"**Cables Tailor Made**" is a special division of Tratos Cavi S.p.A. Working with our customers Cables Tailor Made are able to offer custom designed and built solutions to the most demanding of circumstances. Using our **40 years of cable design and construction experience** we can examine the challenges facing our customers and bring together our expertise and cutting edge technology to provide the ideal tailor made solution. Our **special cables** can incorporate power, control, signalling and fibre-optic elements.

Let's take another turn

*Our cables have been continually working
without any corkscrew effect for many years
with high speed applications
all around the world.*
